Figure 1-1. The Model 495A Microwave Amplifier
(The Model 493A Microwave Amplifier is exactly the same in its physical construction)

Table 1-1. Specifications

FREQUENCY RANGE:
Model 493A: 4 to 8 Gc
Model 495A: 7 to 12.4 Gc

POWER OUTPUT: 1 watt or greater with 1-mw or less input

GAIN: 30 db or greater with 1-mw or less input

GAIN VARIATION WITH FREQUENCY:
At 1-watt output: 6 db or less across the band.
Small Signal: 5 db or less across any 10% of the band, except the 495A, which is across any 300 MHz of the band. 10 db or less across the band, except the 493A which is 12 db or less across the band

GAIN VARIATION WITH LINE VOLTAGE: 1 db or less for ±10% variation from rated line voltage

MAXIMUM RF INPUT: 100 mw

INPUT/OUTPUT CHARACTERISTICS:
Impedance: 50 ohms
SWR: 2.5 or less (cold)

CONNECTORS: Type N female

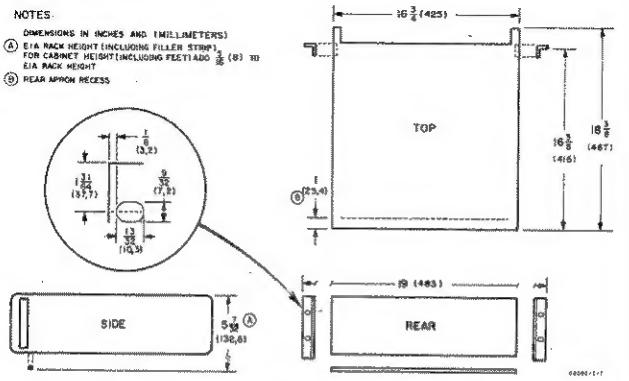
AMPLITUDE MODULATION:
Sensitivity: A modulation input of -20 V peak or greater reduces the RF output by more than 20 db from dc to 50 kc. Above 50 kc modulation decreases approximately 6 db per octave
Residual AM: At least 45 db below modulated output

NOISE:
Noise Figure: 30 db or less
Noise Power Output: 0 dbm or less

FRONT PANEL CONTROL:
Gain; varies grid voltage

METER: Monitors cathode current

DIMENSIONS:



WEIGHT: Net 40 lb (18 kg); shipping 53 lb (23,9 kg)

POWER: 115 or 230 volts ±10%, 50 to 60 cps, approximately 225 watts

ACCESSORIES FURNISHED:
Power Cord, 7-1/2 ft long (2290 mm) NEMA plug.
Hardware for converting cabinet to EIA-conforming rack mount.

ACCESSORIES AVAILABLE:
11501A Cable, type N male to type N female, 6 ft long (1830 mm)
11500A Cable, type N male connectors, 6 ft long (1830 mm)

SECTION I
GENERAL INFORMATION

1-1. INTRODUCTION.

1-2. This manual provides instructions for installation, operation, circuit description, and maintenance of the hp Models 493A and 495A Microwave Amplifiers. The manual applies directly to instruments which carry the serial number prefix indicated on the title page. The Model 495A Microwave Amplifier is shown in figure 1-1. Specifications for both instruments are given in table 1-1.

1-3. DESCRIPTION.

1-4. The hp Models 493A and 495A are broadband linear amplifiers that provide signal amplification to at least 30 db. The Model 493A covers the 4.0 to 8.0 gc range; the Model 495A covers the 7.0 to 12.4 gc range. Both instruments produce at least 1 watt at the output with the application of 1 milliwatt or less at the input.

1-5. The Models 493A and 495A output can be amplitude modulated. Externally supplied modulation signals are applied to the MOD INPUT. Since the modulation circuit is dc coupled, an external leveler circuit can be connected at the MOD INPUT to obtain relatively flat power output across the band.

1-6. The Models 493A and 495A require no tuning and are particularly useful for signal amplification over a broad band of frequencies. The GAIN control is the only variable front panel control. It controls rf signal amplification and average rf power output.

1-7. The Models 493A and 495A traveling-wave amplifier tubes (twt's) utilize periodic permanent magnet focusing, thus they are lightweight, compact and consume less power than solenoid focused twt's.

1-8. An instrument in one frequency range can be converted to an instrument in another frequency range, since both the Models 493A and 495A are identical except for traveling-wave amplifier tube.

1-9. Since the Models 493A and 495A are identical except for the twt, the manual will be discussed in terms of the Model 493A. The Model 495A will be mentioned only when its operation differs from that of the Model 493A.

1-10. The Model 493A uses a modular design which includes a kit that allows conversion to either a cabinet or rack mount configuration.

1-11. INSTRUMENT OPTION.

1-12. The option 01 Model 493A microwave amplifier RF INPUT and OUTPUT connectors are located on the rear panel. In all other respects the option 01 microwave amplifier is the same as a regular microwave amplifier.

1-13. INSTRUMENT IDENTIFICATION.

1-14. Hewlett-Packard uses a two-section eight-digit serial number (000-00000). If the first three digits of the serial number on your instrument do not agree with those on the title page of this manual, change sheets supplied with the manual will define differences between your instrument and the Model 493A described in this manual.

1-15. COOLING SYSTEM.

1-16. The Model 493A uses the forced air method for obtaining the desired temperature within the instrument. Incoming air is filtered through a specially treated filter at the rear of the instrument. The air filter should be checked periodically and if dirty, cleaned. A dirty air filter will affect instrument performance as well as component life. Refer to paragraph 5-1 for air filter maintenance.

1-17. THREE-CONDUCTOR POWER CABLE.

1-18. To protect operating personnel, the National Electrical Manufacturers' Association (NEMA) recommends that the instrument panel and cabinet be grounded. All Hewlett-Packard instruments are equipped with a three-conductor power cable which, when plugged into an appropriate receptacle, grounds the instrument. The offset pin on the power cable's three-prong connector is the green grounding wire.

1-19. To preserve the protection feature when operating the instrument from a two-contact outlet, use a three-prong to two-prong adapter and connect the green pigtail on the adapter to ground.

1-20. INCREASING TUBE LIFE.

1-21. The cathode of the traveling-wave amplifier tube has a shorter cathode life than those used in conventional types of tubes. In addition, the traveling-wave amplifier tube is expensive. TURN THE INSTRUMENT OFF WHEN NOT IN USE.

1-22. TRAVELING-WAVE AMPLIFIER TUBE (TWT).

1-23. The twt supplied with the microwave amplifier and replacement twt's purchased from Hewlett-Packard Company are guaranteed against electrical failure for a specified period (either period of time from date of purchase or number of hours of instrument operation). For information regarding warranty contact your local Hewlett-Packard field office. A sheet for your use is included in the appendix of this manual.

SECTION I
GENERAL INFORMATION

1-1. INTRODUCTION.

1-2. This manual provides instructions for installation, operation, circuit description, and maintenance of the Models 493A and 495A Microwave Amplifiers. The manual applies directly to instruments which carry the serial number prefix indicated on the title page. The Model 495A Microwave Amplifier is shown in figure 1-1. Specifications for both instruments are given in table 1-1.

1-3. DESCRIPTION.

1-4. The Models 493A and 495A are broadband linear amplifiers that provide signal amplification to at least 30 db. The Model 493A covers the 4.0 to 8.0 gc range; the Model 495A covers the 7.0 to 12.4 gc range. Both instruments produce at least 1 watt at the output with the application of 1 milliwatt or less at the input.

1-5. The Models 493A and 495A output can be amplitude modulated. Externally supplied modulation signals are applied to the MOD INPUT. Since the modulation circuit is dc coupled, an external leveler circuit can be connected at the MOD INPUT to obtain relatively flat power output across the band.

1-6. The Models 493A and 495A require no tuning and are particularly useful for signal amplification over a broad band of frequencies. The GAIN control is the only variable front panel control. It controls rf signal amplification and average rf power output.

1-7. The Models 493A and 495A traveling-wave amplifier tubes (twt's) utilize periodic permanent magnet focusing, thus they are lightweight, compact and consume less power than solenoid focused twt's.

1-8. An instrument in one frequency range can be converted to an instrument in another frequency range, since both the Models 493A and 495A are identical except for traveling-wave amplifier tube.

1-9. Since the Models 493A and 495A are identical except for the twt, the manual will be discussed in terms of the Model 493A. The Model 495A will be mentioned only when its operation differs from that of the Model 493A.

1-10. The Model 493A uses a modular design which includes a kit that allows conversion to either a cabinet or rack mount configuration.

1-11. INSTRUMENT OPTION.

1-12. The option 01 Model 493A microwave amplifier RF INPUT and OUTPUT connectors are located on the rear panel. In all other respects the option 01 microwave amplifier is the same as a regular microwave amplifier.

1-13. INSTRUMENT IDENTIFICATION.

1-14. Hewlett-Packard uses a two-section eight-digit serial number (000-00000). If the first three digits of the serial number on your instrument do not agree with those on the title page of this manual, change sheets supplied with the manual will define differences between your instrument and the Model 493A described in this manual.

1-15. COOLING SYSTEM.

1-16. The Model 493A uses the forced air method for obtaining the desired temperature within the instrument. Incoming air is filtered through a specially treated filter at the rear of the instrument. The air filter should be checked periodically and if dirty, cleaned. A dirty air filter will affect instrument performance as well as component life. Refer to paragraph 5-1 for air filter maintenance.

1-17. THREE-CONDUCTOR POWER CABLE.

1-18. To protect operating personnel, the National Electrical Manufacturers' Association (NEMA) recommends that the instrument panel and cabinet be grounded. All Hewlett-Packard instruments are equipped with a three-conductor power cable which, when plugged into an appropriate receptacle, grounds the instrument. The offset pin on the power cable's three-prong connector is the green grounding wire.

1-19. To preserve the protection feature when operating the instrument from a two-contact outlet, use a three-prong to two-prong adapter and connect the green pigtail on the adapter to ground.

1-20. INCREASING TUBE LIFE.

1-21. The cathode of the traveling-wave amplifier tube has a shorter cathode life than those used in conventional types of tubes. In addition, the traveling-wave amplifier tube is expensive. TURN THE INSTRUMENT OFF WHEN NOT IN USE.

1-22. TRAVELING-WAVE AMPLIFIER TUBE (TWT).

1-23. The twt supplied with the microwave amplifier and replacement twt's purchased from Hewlett-Packard Company are guaranteed against electrical failure for a specified period (either period of time from date of purchase or number of hours of instrument operation). For information regarding warranty contact your local Hewlett-Packard field office. A sheet for your use is included in the appendix of this manual.

SECTION II
INSTALLATION

2-1. AIR FILTER.

2-2. This instrument is equipped with a renewable type air filter. When first unpacking and placing the instrument into service the filter must be coated with a dirt gathering adhesive to make it effective. While light machine oil is satisfactory, we recommend a water-soluble adhesive such as "Super Filter Coat" manufactured by Research Products Corporation of Madison 1, Wisconsin.

2-3. MECHANICAL INSPECTION.

2-4. Unpack the instrument upon receipt and inspect it for signs of physical damage such as scratched panel surfaces, broken knobs, etc. The Model 493A should be checked electrically. Section V includes a performance check which is an in-cabinet check to verify proper operation and is a good test as part of incoming inspection. If there is any apparent damage, file a claim with the carrier and refer to the warranty page in this manual.

2-5. INSTALLATION.

2-6. The Model 493A is of modular design. It is shipped as a cabinet instrument. A kit is included with the instrument for conversion from cabinet to rack mount configuration (see paragraph 2-7, Conversion to Rack Mount).

Note

The instrument fan is located on the rear panel. Make provisions to insure that the instrument obtains sufficient air. The ambient temperature within the instrument should not be greater than 35 °C.

2-7. CONVERSION TO RACK MOUNT.

2-8. To convert the Model 493A to a rack-mounted instrument. proceed as follows (see Figure 2-1):

a. Remove adhesive-backed trim strip from sides of instrument.

b. Remove tilt stand by pressing the two sides of the stand toward center of instrument.

c. Remove plastic feet by pressing button in center of each foot and sliding the foot toward center of instrument.

d. Attach filler strip to bottom of instrument.

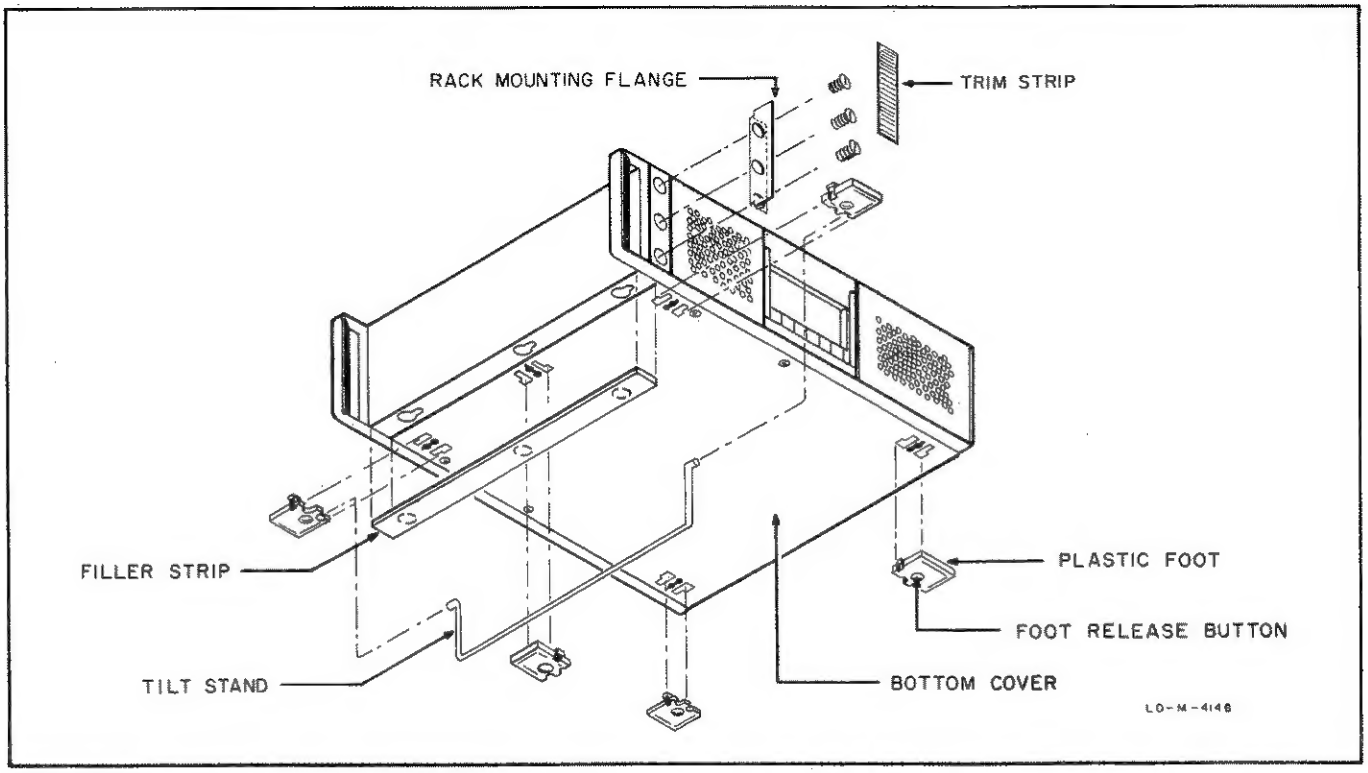


Figure 2-1. Cabinet to Rack Mount Conversion

e. Add filler strip to bottom of instrument.

2-9. POWER REQUIREMENTS.

2-10. The Model 493A is usually shipped connected for 115-volt, 50 to 60 cps operation. To convert tc 230-volt, 50 to 60 cps operation:

a. Move slide switch in the rear of the instrument to the 230-volt position (when properly positioned switch will read 230 volts). See figure 2-2.

CAUTION

NEVER SWITCH THE 115-230 VOLT SWITCH S2 FROM ONE POSITION TO THE OTHER WHEN THE INSTRUMENT IS IN OPERATION.

b. Replace the 3-ampere standard fuse with a 1-1/2 ampere standard fuse.

2-11. REPACKAGING FOR SHIPMENT.

2-12. The following list is a general guide for repackaging an instrument for shipment. However, if you have any questions, contact your Hewlett-Packard Engineering Representative.

a. If possible, use the original container designed for the instrument.

b. Wrap the instrument in heavy paper or plastic before placing it in the shipping container.

c. Use plenty of packing material around all sides of the instrument and protect panel faces with cardboard strips.

d. Use a heavy cardboard carton or wooden box tc house the instrument and use heavy tape or metal bands to seal the container.

e. Mark the packing box with "Fragile", "Delicate Instrument", etc.

SECTION III
OPERATION

3-1. INTRODUCTION.

3-2. The Model 493A Microwave Amplifier has only one control, the GAIN control; thus it is easy to operate. The GAIN control and input and output connectors are explained under paragraph 3-3.

CAUTION

The instrument should not be allowed to remain in operation for long periods of time without fan duct and panels. Ambient temperature within instrument will increase causing excessive helix current to flow.

3-3. FRONT PANEL CONTROLS.

3-4. GAIN CONTROL. The GAIN control sets the gain of the amplifier. Maximum input-vs-output gain of the instrument is at least 30 db for outputs up to 1 watt. With a signal applied at the microwave amplifier input the only way to insure zero output is to place the instrument on STANDBY.

3-5. CURRENT METER. The current meter monitors cathode current. The instrument has a gain of at least 30 db for outputs up to 1 watt when the GAIN control is adjusted to within the RATED POWER limits indicated on the meter.

3-6. RF INPUT AND OUTPUT. An rf signal, up to 100 milliwatts, in the 4.0 to 8.0 gc range (7.0 to 12.4 gc for the Model 495A) is applied to the RF INPUT. Input and output impedance is 50 ohms at rf frequencies; infinity at dc. SWR is less than 3:1.

CAUTION

DO NOT APPLY AN INPUT SIGNAL BEFORE APPLYING AN EXTERNAL LOAD AT THE RF OUTPUT. THE TWT CAN BE DAMAGED.

3-7. MODULATION INPUT. The MOD INPUT accepts externally applied dc to 500 kc signals up to 10 volts in amplitude, or dc to 100 kc signals up to -20 volts in amplitude. Modulation signal amplitudes of -20 volts will produce a modulation on-off ratio of at least 20 db. Since the modulator is dc coupled, an rf power leveler circuit can be applied between the RF POWER OUTPUT and MOD INPUT (see paragraph 3-16). Under no circumstances should the modulation voltage be allowed to go positive unless GAIN is reduced accordingly. In other words, peak cathode current must not exceed RATED POWER level.

3-8. OPERATING INSTRUCTIONS.

3-9. Turn-on and amplitude modulation procedures are given in figures 3-1 and 3-2.

3-10. MICROWAVE AMPLIFIER APPLICATIONS.

3-11. The Model 493A is used for broadband or narrow-band power amplification and amplitude modulation. An external rf leveler circuit can be employed where relatively constant output power is required.

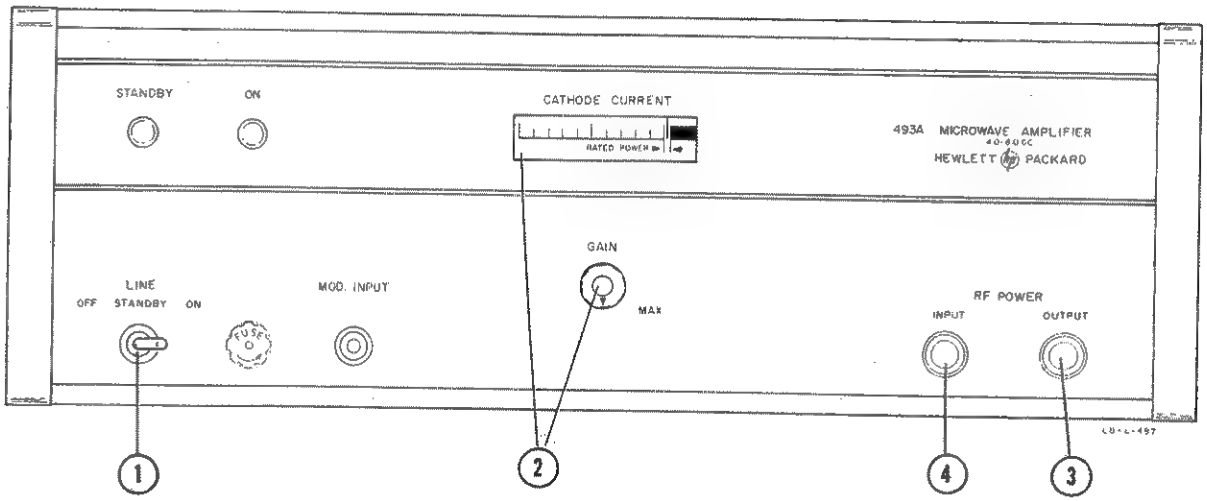
3-12. BROADBAND AMPLIFICATION. The Model 493A will faithfully amplify many broadband signals such as those employed in radar, television relays and microwave carrier systems. In addition to this broadband feature, it has a linear amplification characteristic over the frequency range.

3-13. Of the many broadband applications of the Model 493A, some of the most useful are: 1) investigation of information handling capacity in broadband microwave communications systems, 2) amplification of low-frequency harmonics to produce frequency markers used in microwave-frequency measurements.

3-14. NARROWBAND AMPLIFICATION. The Models 493A and 495A can be used for narrowband amplification at any one point across the 4.0 to 12.4 gc range. Noise can be greatly reduced by employing a narrow bandpass filter in conjunction with the Models 493A and 495A Microwave Amplifiers.

3-15. POWER AMPLIFICATION. The Model 493A can be used as a moderate power, broadband signal source by amplifying the low power output of klystron signal generators in the 4.0 to 12.4 gc range. Thus a microwave source-amplifier combination can be used in many applications where a generous amount of microwave power is required. Typical applications are 1) wide-range antenna measurements to plot patterns to determine efficiency, directivity, etc., 2) portable low-cost means of providing moderate power microwave-signal sources for field-testing a microwave installation.

3-16. CONSTANT OUTPUT AMPLIFICATION. Many amplifier applications require a constant output level characteristic. Although the Model 493A traveling-wave amplifier tube's saturated output characteristic can be used to provide nearly constant power output, the use of feedback circuitry provides a more versatile and effective means of control. One such arrangement for obtaining relatively constant rf output power is shown in figure 3-3. In this circuit a portion of the rf signal is coupled from the traveling-wave amplifier tube output, through a directional coupler to a detector such as a crystal rectifier. The detected rf output is then amplified and applied to the MOD INPUT. With this arrangement any tendency for the output-power level to increase is immediately detected, amplified, and fed back to reduce the gain of the amplifier. Conversely, any reduction in output level increases the



CAUTION

NEVER APPLY POWER TO THE MODEL 493A/495A INPUT UNLESS ITS OUTPUT IS TERMINATED INTO A 50-OHM LOAD. THE TWT CAN BE DAMAGED.

1. Set LINE switch to ON. The STANDBY lamp glows. Approximately 90 seconds later the ON lamp will glow and the instrument is ready for normal operation. If the Model 493A/495A is placed in the STANDBY position, the STANDBY lamp will glow. Approximately 90 seconds later high voltage will be applied to the instrument only when the primary power switch is set from STANDBY to ON. The purpose of the STANDBY position is to instantly turn rf power output "on" or "off" after initial turn-on without waiting for the initial 90-second time delay.

Note

The instrument should be turned to ON and allowed to warm up for 30 minutes before proceeding to step 2.

2. Rotate GAIN control clockwise to within RATED POWER indicated on meter (full clockwise). With the CURRENT meter pointer set within normal meter limits, a maximum of 1 mw at the input produces a minimum of 1 watt at the output across the frequency range. Small signal gain is at least 30 db. A constant 1-mw signal at the input of the Model 493A/495A across the band produces an amplified power output variation across the band of 6 db or less.

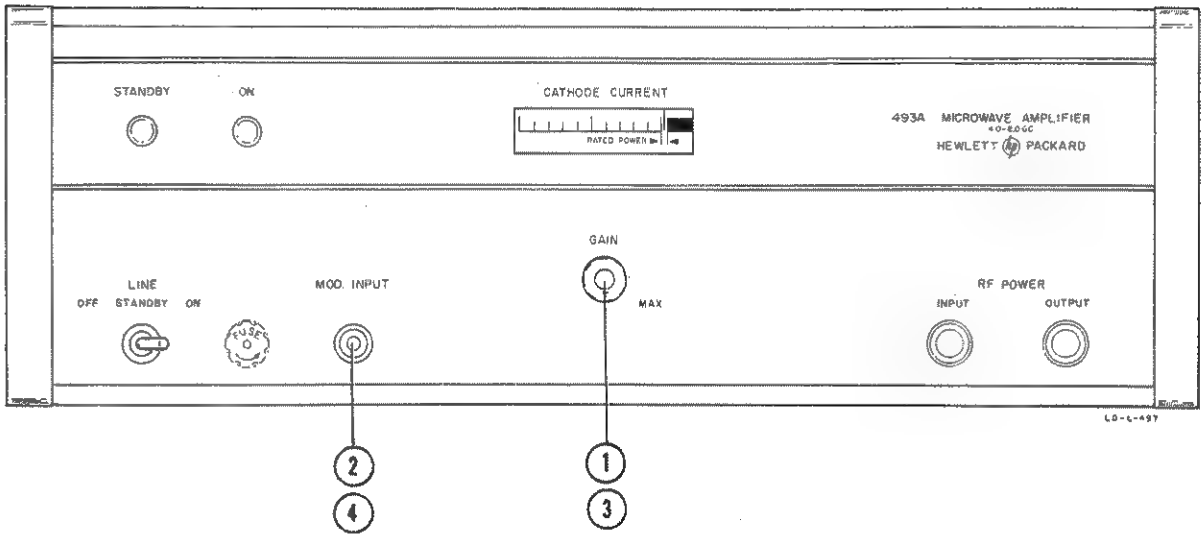
Note

If excessive helix current is drawn by the twt, the overload relay K3 will energize, removing high voltage from the circuit. Also if the filament voltage is not correct, the fail-safe relay K304 will energize, removing high voltage and filament voltage from the circuit. In such cases, the primary power switch must be switched off, then on again. If condition persists remove the power from the instrument and troubleshoot.

3. Connect Model 493A/495A OUTPUT to the instrument into which the amplified signal is to be applied.

4. Apply rf power to the Model 493A/495A INPUT. The maximum allowable power than can be applied to the Model 493A/495A INPUT is 100 mw.

Figure 3-1. Turn-On Procedure



1. Rotate the GAIN control full clockwise.

2. Apply a negative-going signal to the MOD INPUT. Specifications: bandpass for small signal inputs dc to 500 kc; bandpass for large signal inputs dc to 100 kc. Small signal inputs are from 0 to -10 volts; large signal inputs -10 to -20 volts. Bandwidths are measured at the grid of the twt.

Note

Peak cathode current must not be allowed to exceed RATED POWER level. If the MOD INPUT voltage is positive during any part of the modulation cycle, GAIN must be reduced accordingly.

Figure 3-2. Amplitude Modulation

gain of the amplifier to hold the output level constant. In practice, output levels can be held within 1 db during input signal variations as great as 20 db.

Note

The limitations to the degree of leveling obtainable is determined by errors introduced by crystal detector and directional coupler.

3-17. BUFFER OR ISOLATION. The Model 493A Microwave Amplifier can also be used as a buffer between a microwave-signal source and an external load. As a buffer it isolates load reflections from the signal source and eliminates the problems which occur when the source is modulated directly.

3-18. AMPLITUDE MODULATION. The Model 493A is particularly suitable for use in power amplifier systems. This feature opens new fields of application since it is not possible to amplitude modulate a reflex klystron directly. Furthermore, the traveling wave amplifier tube's use as a power amplifier means that rf output from a microwave oscillator can be sine wave, pulse, or pulse-train modulated without starting delays and jitter generally present when the oscillator itself is modulated. Thus, in addition to amplification the traveling-wave amplifier tube provides a simple system of amplitude modulation.

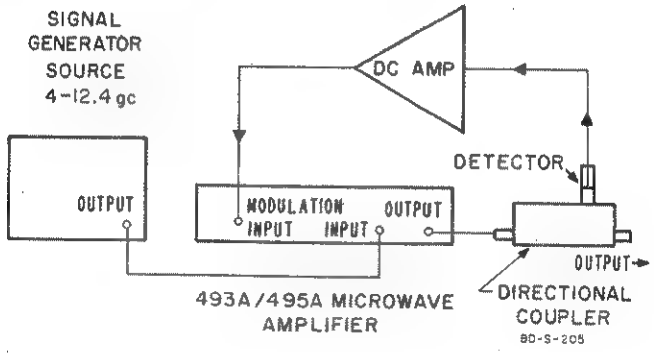


Figure 3-3. RF Leveler Setup

SECTION IV
CIRCUIT DESCRIPTION

4-1. INTRODUCTION.

4-2. The Models 493A and 495A circuitry is the same. Only the traveling-wave amplifier tube (twt) types are different. However, the basic traveling-wave tube explanation given in this section applies for both the Models 493A and 495A twt types.

4-3. OVERALL DESCRIPTION.

4-4. A block diagram of the Model 493A is shown in figure 4-1. The purpose of the Model 493A Microwave Amplifier is to provide a means of amplifying a signal in the 4.0 to 8.0 gc range (7.0 to 12.4 gc range for the Model 495A), to control the amount of amplification produced, and to supply external modulation facilities for the amplified signal.

4-5. The signal is applied to the microwave amplifier input, amplified, and taken at the output of the traveling-wave amplifier tube (twt). All voltages required by the twt are supplied by the regulated high-voltage power supply and the modulator. The regulated high-voltage power supply supplies collector, helix, and anode voltages to the twt. The modulator supplies voltages to the grid of the twt. Power gain of the twt is controlled by the modulator GAIN control. Positive voltage for the modulator is supplied through a +300-volt regulator circuit which maintains +300 at modulator; negative voltage is supplied by the modulator power supply. Cathode current is monitored by the current monitoring meter M201.

4-6. TRAVELING WAVE AMPLIFIER TUBE.

4-7. The traveling-wave amplifier tube used in the Model 493A/495A includes an electron gun which projects a focused beam through a helically-wound coil to a collector electrode (shown in figure 4-2). The focused electrons are held in a pin-like beam through the helix by the periodic permanent magnet focusing which produces a powerful magnetic field along the full length of the tube.

4-8. The rf signal coupled into the gun end of the helix travels around the turns of the helix and thus has its linear velocity reduced by an amount equal to the ratio of the length of wire in the helix to the length of the helix itself. The electron beam velocity, determined by the potential difference between the cathode and the helix, is adjusted so that the electron beam travels a little faster than the rf signal. The electric field of the rf signal on the helix interacts with the

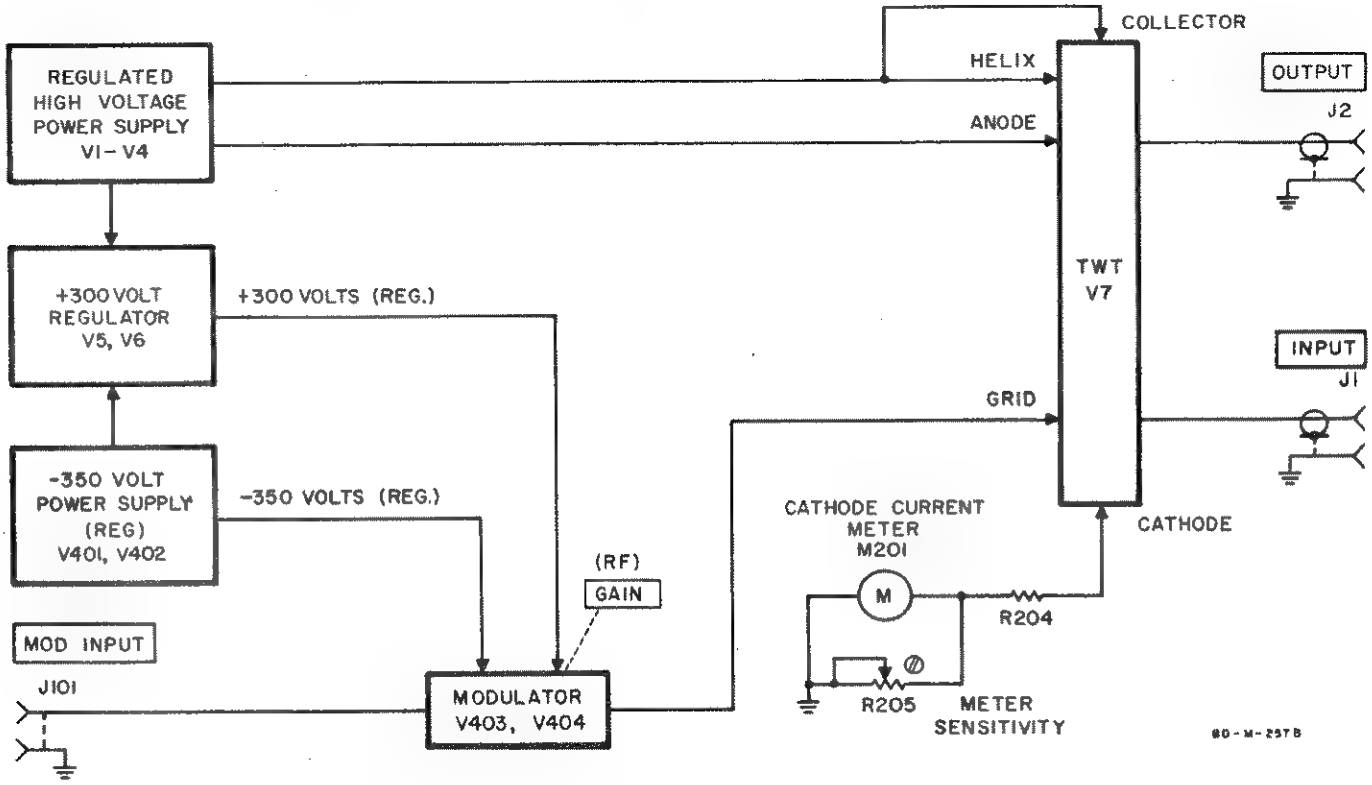

Figure 4-1. Model 493A/495A Block Diagram

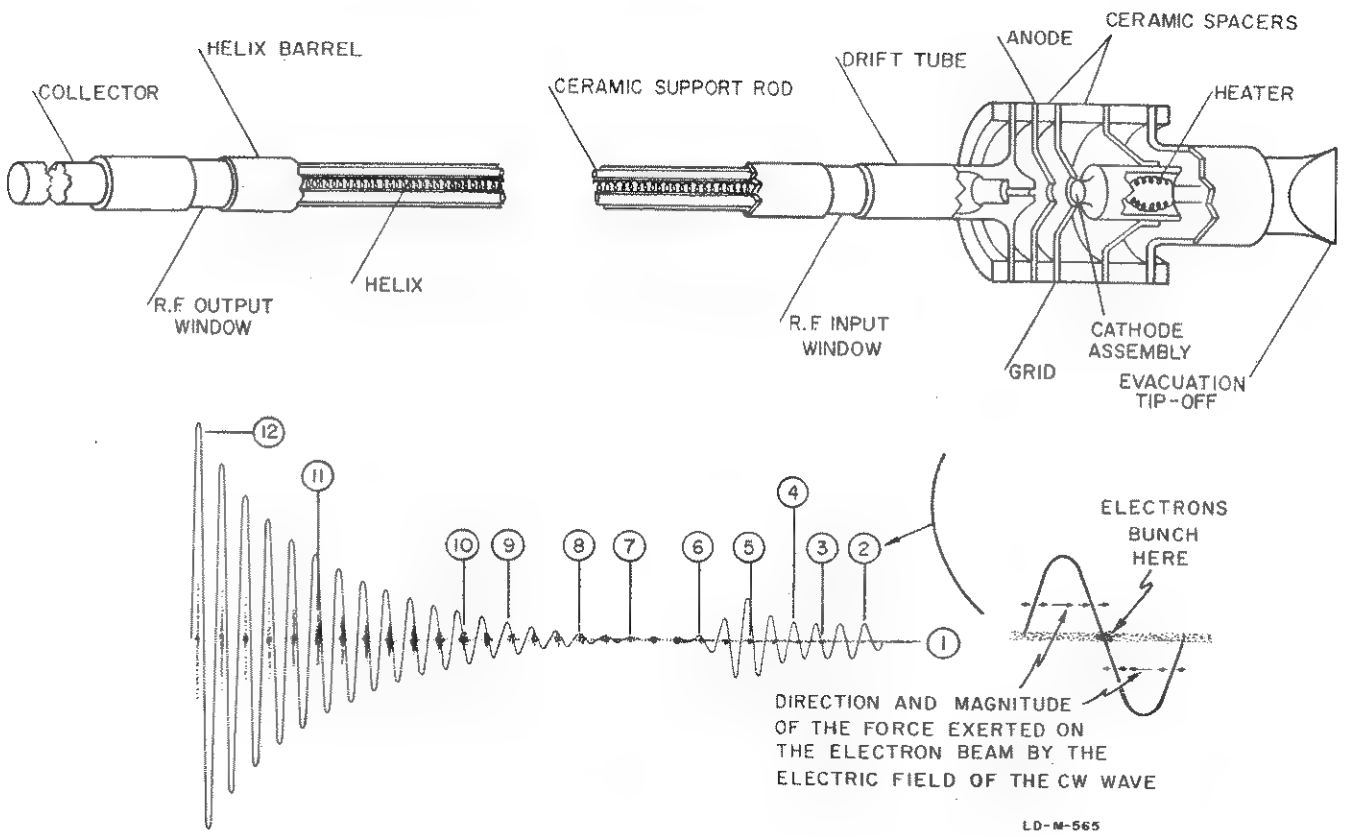

1. Electron beam directed through center of helix.
2. RF signal coupled into helix. The arrows show direction and magnitude of force exerted on the electron beam by the rf signal.
3. Electron bunching caused by the electric field of the rf signal.
4. Amplification of signal of helix begins as the field formed by the electron bunches interacts with the electric field of the rf signal. The newly formed electron bunch adds a small amount of voltage to the rf signal on the helix. The slightly amplified rf signal then produces a denser electron bunch which in turn adds a still greater voltage to the rf signal, and so on.
5. Amplification increases as the greater velocity of the electron beam pulls the electron bunches more nearly in phase with the electric field of the rf signal. The additive effect of the two fields exactly in phase produces a greatest resultant amplification.
6. Attenuators placed near the center of the helix reduce all the waves traveling along the helix to nearly zero. This prevents undesired waves, such as waves reflected from mismatched loads, from returning to the tube input and causing oscillation.
7. Electron bunches travel through attenuator unaffected.
8. Electron bunches emerging from attenuator induce a new rf signal on helix. New rf signal is the same frequency as the original rf signal applied.
9. Field of newly induced rf signal interacts with bunched electrons to begin the amplification process over again.
10. For a short distance the velocity of the electron bunches is reduced slightly due to the large amount of energy absorbed by the formation of the new rf signal.
11. Amplification increases as the greater velocity of the electron beam pulls the electron bunches more nearly in phase with the electric field of the rf signal.
12. At point of desired amplification the amplified rf signal is coupled out of the helix. NOTE THAT THE "AMPLIFIED" RF SIGNAL IS A NEW SIGNAL WHOSE ENERGY IS WHOLLY SUPPLIED BY THE BUNCHED ELECTRON BEAM.

Figure 4-2. TWT and How it Works

electron field created by the electron beam and increases the amplitude of the signal on the helix, thus producing the desired amplification.

Note

The ceramic magnets used in twt, 493A will defocus the electron beam if ambient temperature of the instrument exceeds 35 °C. Thus with twt operating above this temperature poor power amplification performance can be expected.

4-9. REGULATED HIGH VOLTAGE POWER SUPPLY.

4-10. A block diagram of Regulated High Voltage Power Supply is shown in figure 4-3. The regulated high-voltage power supply is a series regulated power supply that includes series regulator V1/V2, reference tubes V3, V4, and differential amplifier V5.

4-11. The series regulator V1/V2 is connected in series with the main load. A regulated output voltage is obtained by varying the internal resistance of the series regulator to compensate for variations in load current and source voltage.

4-12. Initially the voltage at the grid of V5B sets the conduction of the series regulator which in turn sets the output voltage level. When the output voltage varies from the level set by the high voltage level adjust R57, these variations are sensed at the grid of V5A/B. The resultant signal is amplified and sent to the series regulator. The series regulator resistance varies to maintain the output voltage constant.

4-13. C12 and C13 (see figure 5-12) are part of the bypass and filter circuits at the output of the regulator tubes V3, V4. C15 couples ac ripple directly to the grid of V5, thus decreasing ripple voltage by lowering dynamic impedance.

4-14. A voltage doubler which includes CR7 through CR20 and C11A/B produces approximately 2.9 to 3.4 kv at normal line voltage. The actual high voltage output is dependent on how the transformer T1 has been connected (see table, figure 5-12).

4-15. CATHODE CURRENT ADJ. The cathode current adj R53, is connected in a resistive string from the high-voltage power supply regulated output to ground. When an anode type tube is used, adjustment of R53 sets the voltage on the anode thus setting beam current. The anode voltage is set to the value that will produce at least 1 watt at the RF OUTPUT with the application of 1 milliwatt or less at RF INPUT. R53 is inoperative for those tubes that do not have an anode.

4-16. +300 VOLT REGULATION CIRCUIT.

4-17. This regulated power supply includes the +300 volt regulator V6, and +300 volt control tube V8. The circuit is a series regulated supply similar in operation to that of the high voltage power supply. The supply derives its voltage from the regulated high voltage power supply and thus produces a nearly ripple free highly regulated voltage to the modulator. There is no control for adjustment of the +300 volt modulator power supply. All components are fixed to provide the +300 volt output to the modulator regardless of the high voltage power supply output. The -350 volt supply is the reference for the +300 volt regulated power supply.

4-18. MODULATOR.

4-19. A block diagram of the modulator is shown in figure 4-4. The modulator includes an amplifier circuit and a regulated power supply. The amplifier circuit is a dc coupled circuit that sets the gain characteristics of the traveling-wave amplifier tube and accepts externally applied amplitude modulation signals from dc to 500 kc (dc to 100 kc for large signals). The regulated power supply provides -350 volts to the amplifier circuit and high voltage power supply.

4-20. AMPLIFIER CIRCUIT. The amplifier circuit includes Differential Amplifier V403, Output Amplifier V404, and Hold-off Transistor Q401. External modulation signals are applied through the A section of the Differential Amplifier V403, to the output amplifier V404. The V404 output is applied to the grid of the traveling-wave tube. Degenerative feedback is supplied from the output of V404 to V403 to increase stability and frequency response.

4-21. Gain of the TWT (average rf output level) is set by adjusting the GAIN control in the B section of the Differential Amplifier V403. The voltage at the grid of the TWT is set at some negative potential. The Gain Limit Adj control R418 sets the highest positive voltage on the grid of the TWT. Hold-off transistor Q401 protects the TWT from a transient when the instrument is switched from STANDBY to ON. Normally, the application of a step-function positive voltage when turning on the +300 volt supply to the modulator would result in a positive transient spike to the TWT grid. This transient spike would cause excess helix current to be drawn and the helix overload relay to operate. To protect the instrument the Hold-off Transistor Q401 applies a positive voltage to V403B during the stand-by period. This positive voltage saturates V403B holding V404 in a condition such that the voltage applied to the grid of the TWT is negative. This action takes place whenever the voltage on the base of Q401 (a npn transistor) drops. This drop in voltage causes Q401 to cut-off. When Q401 is cut off the only voltage applied to CR403 is the voltage developed through R414, R415, and R431. This positive voltage is applied through CR403, since CR403 will now be forward-biased, to the grid of V403B. When the instrument is switched from STANDBY to ON the positive voltage from the +300 volt supply is applied to the base of Q401 through R416 and R417. This positive voltage turns Q401 on, causing current to flow from the -350 volt supply through R417, Q401, and R415 to CR403. This negative voltage will back-bias CR403 causing it to open and disconnect the hold-off circuitry. The instrument is now back to its normal operating condition.

4-22. -350 VOLT REGULATED POWER SUPPLY. The regulated power supply is a conventional series regulated power supply that provides -350 volts for the amplifier circuit. The circuit includes the series regulator V401A, control tube V401B, and reference tube V402. The -350 V Adj control R405 is used to set the regulated voltage output of the supply.

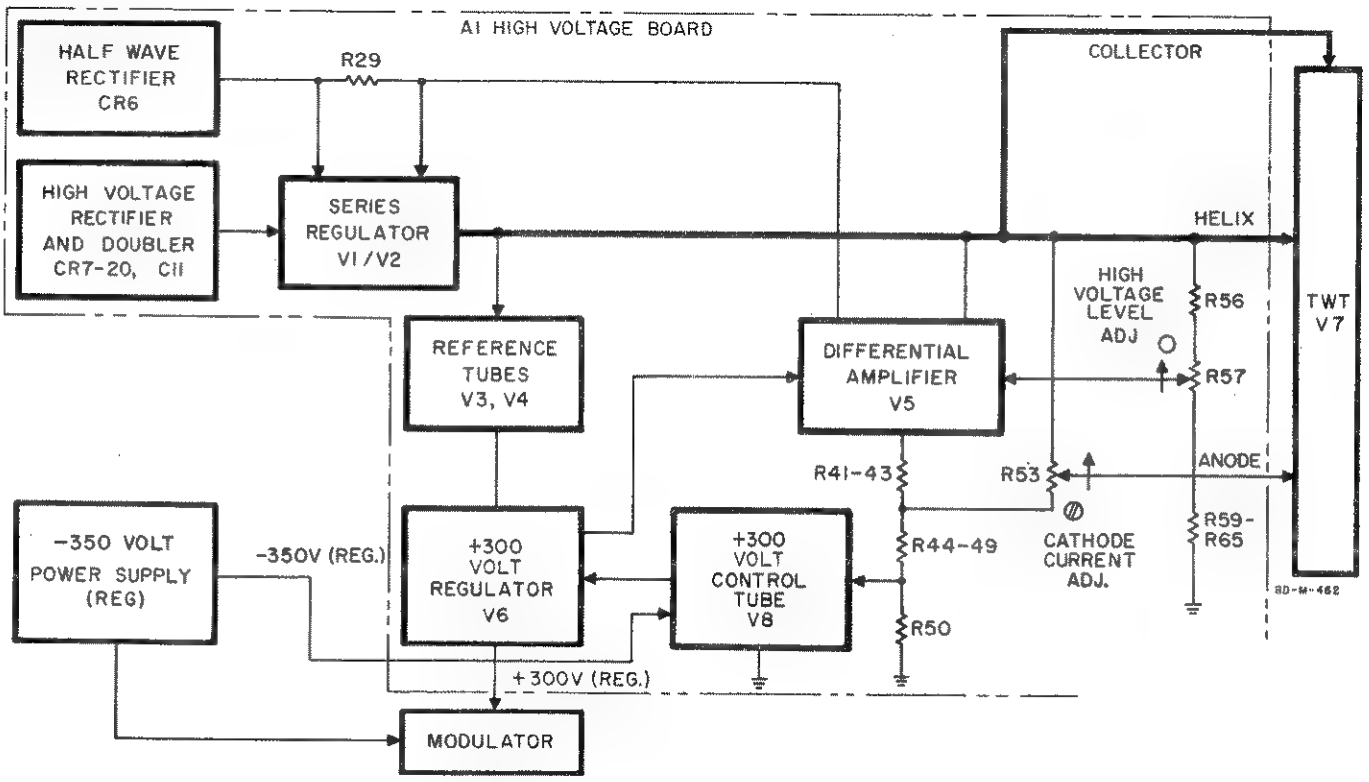

Figure 4-3. Block Diagram of Regulated High Voltage Power Supply

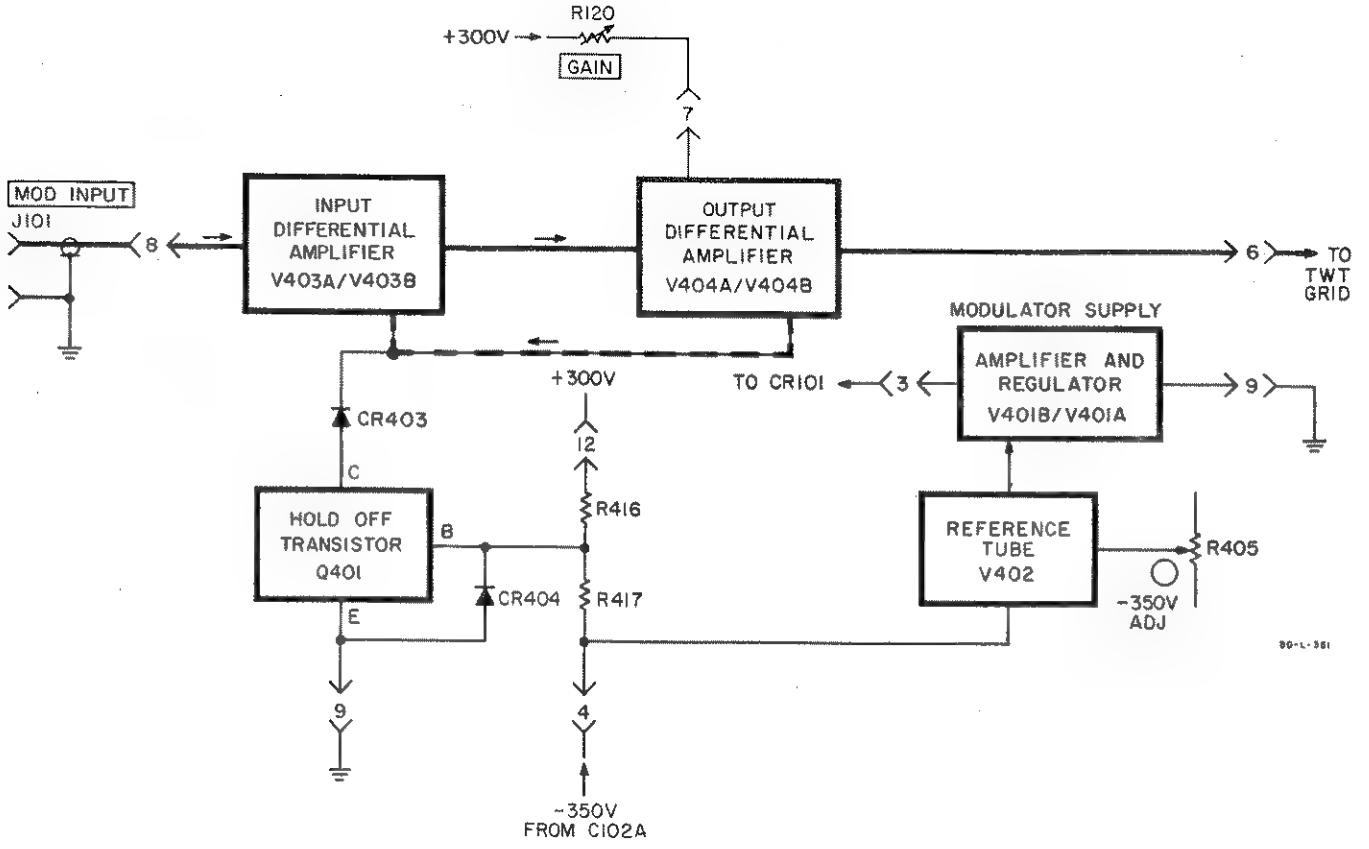

Figure 4-4. Block Diagram of Modulator

4-23. RELAY SEQUENCE.

4-24. A simplified illustration of the relay sequence is shown in figure 4-5. When the Model 493A is first turned to ON, power is applied to the transformer T2. Filament voltage is applied to all tubes in the instrument as well as to the 90-second time delay relay K1. After 90 seconds have elapsed, relay K1 will close, completing current flow path for delay slave relay K2. The relay K2 will energize: 1) completing the current path to the high voltage transformer T1, and 2) it will act as a holding relay for itself by bypassing the contacts at the time delay relay K1. The instrument is now operating normally. V1, V2, and V5 filaments and relays K1, K2, and K3 are held 200 volts above the helix.

4-25. When the instrument is placed on STANDBY the sequence will be the same as described in paragraph 4-24, but high voltage will be applied to the instrument after 90 seconds, only if the Model 493A primary power switch is placed in the ON position. The STANDBY position permits the turning of RF power "on" or "off" instantly by switching from STANDBY to ON (or from ON to STANDBY), once the initial 90-second time delay has elapsed.

4-26. In the event excessive helix current is drawn by the traveling-wave amplifier tube, a protective device, the overload relay K3, will energize. Energizing K3 interrupts the current path for delay slave relay K2, which in turn removes power from the high voltage transformer T1. CR22 acts as a half-wave rectifier for the 6.3 vac signal, when the overload relay K3 is energized. This rectified output supplies approximately 2.5 ma to the overload relay K3 holding it energized, once high voltage has been removed.

4-27. REGULATED FILAMENT SUPPLY.

4-28. The filament supply is a conventional series regulated power supply that supplies approximately 6.3 volts dc to the filament of the differential amplifier V103, and TWT, V7. Successive regulation is provided by CR304 and CR305 to hold the base of Q301 constant. The filament adj. R306 sets the regulated output voltage.

4-29. Protection in the event that the filament voltage exceeds the limits set by the filament adj. R306 is provided by the relay K304 and CR308. K304 and CR308 are placed in parallel with the filaments. If the voltage limit set by filament adjust R306, is exceeded, CR308 will break down and K304, will energize, opening the filament circuit and removing ac power to high voltage power supply.

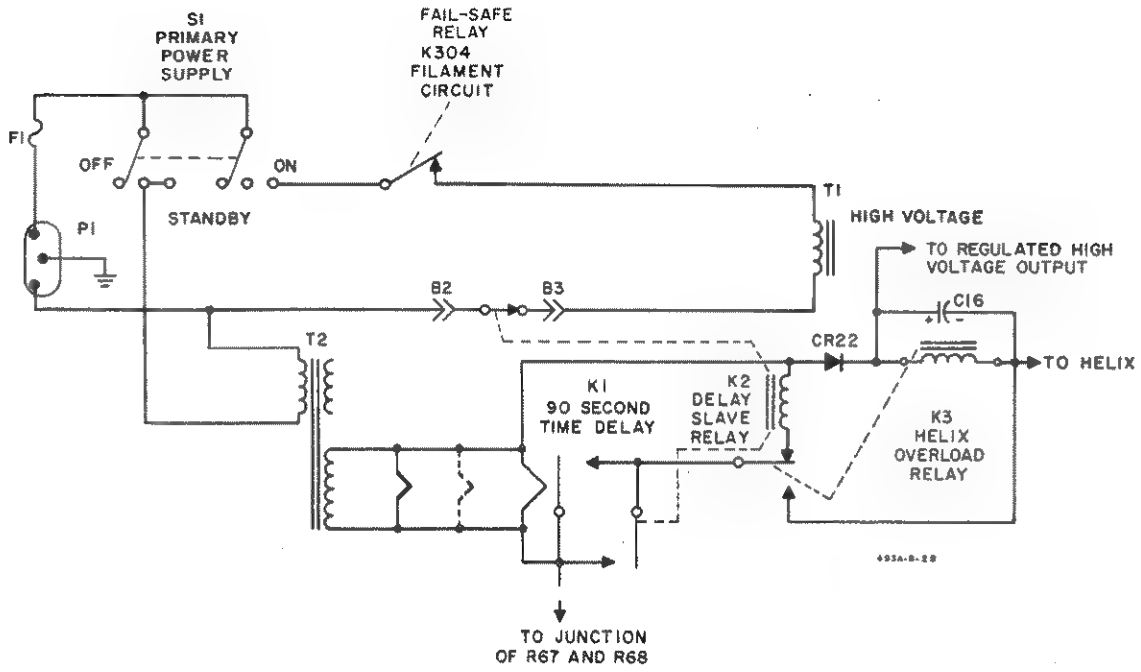

Figure 4-5. Relay Sequence

4-23. RELAY SEQUENCE.

4-24. A simplified illustration of the relay sequence is shown in figure 4-5. When the Model 493A is first turned to ON, power is applied to the transformer T2. Filament voltage is applied to all tubes in the instrument as well as to the 90-second time delay relay K1. After 90 seconds have elapsed, relay K1 will close, completing current flow path for delay slave relay K2. The relay K2 will energize: 1) completing the current path to the high voltage transformer T1, and 2) it will act as a holding relay for itself by bypassing the contacts at the time delay relay K1. The instrument is now operating normally. V1, V2, and V5 filaments and relays K1, K2, and K3 are held 200 volts above the helix.

4-25. When the instrument is placed on STANDBY the sequence will be the same as described in paragraph 4-24, but high voltage will be applied to the instrument after 90 seconds, only if the Model 493A primary power switch is placed in the ON position. The STANDBY position permits the turning of RF power "on" or "off" instantly by switching from STANDBY to ON (or from ON to STANDBY), once the initial 90-second time delay has elapsed.

4-26. In the event excessive helix current is drawn (5 to 7 ma) by the traveling-wave amplifier tube, a protective device, the overload relay K3, will energize. Energizing K3 interrupts the current path for delay slave relay K2, which in turn removes power from the high voltage transformer T1. CR9 acts as a half-wave rectifier for the 6.3 vac signal, when the overload relay K3 is energized. This rectified output supplies approximately 2.5 ma to the overload relay K3 holding it energized, once high voltage has been removed.

4-27. REGULATED FILAMENT SUPPLY.

4-28. The filament supply is a conventional series regulated power supply that supplies approximately 6.3 volts dc to the filament of the differential amplifier V103, and TWT, V7. Successive regulation is provided by CR304 and CR305 to hold the base of Q301 constant. The filament adj. R306 sets the regulated output voltage.

4-29. Protection in the event that the filament voltage exceeds the limits set by the filament adj. R306 is provided by the relay K304 and CR308. K304 and CR308 are placed in parallel with the filaments. If the voltage limit set by filament adjust R306, is exceeded, CR308 will break down and K304, will energize, opening the filament circuit and removing ac power to high voltage power supply.

SECTION V
MAINTENANCE

5-1. AIR FILTER MAINTENANCE.

5-2. The air filter is located at the rear of the instrument. Inspect air filter frequently and clean whenever an appreciable amount of dirt has collected on it. Proper maintenance of the filter will produce longer twt tube and component life.

5-3. The filter should be washed in hot water and detergent to throughly remove all dirt deposits. After filter is clean, allow it to dry. Compressed air speeds the process.

5-4. To be most effective, the filter must be coated with a dirt gathering adhesive. While light machine oil is satisfactory, we recommend using a water-soluble adhesive such as "Super Filter Coat" manufactored by Research Products Corporation of Madison 1, Wisconsin.

5-5. This product is available in 1.5 fl. ounce cans equipped with a handy spray applicator at most heating supply stores. You can also obtain it from your ℌ Engineering Representative. The ℌ Stock Number is 3150-0002.

5-6. COVER REMOVAL.

5-7. ℌ modular instrument enclosures have removable top, bottom, and side covers for easy access to the instrument interior (see Figure 5-1). Instructions for cover removal and replacement are given below.

5-8. TOP AND BOTTOM COVERS.

a. Remove four flat-head screws from covers.

b. Slide cover back and off instrument.

c. To replace cover reverse procedure.

5-9. SIDE COVERS.

a. Remove four round-head screws holding each side cover.

b. Remove side cover.

c. Reverse procedure to replace the side-cover sections.

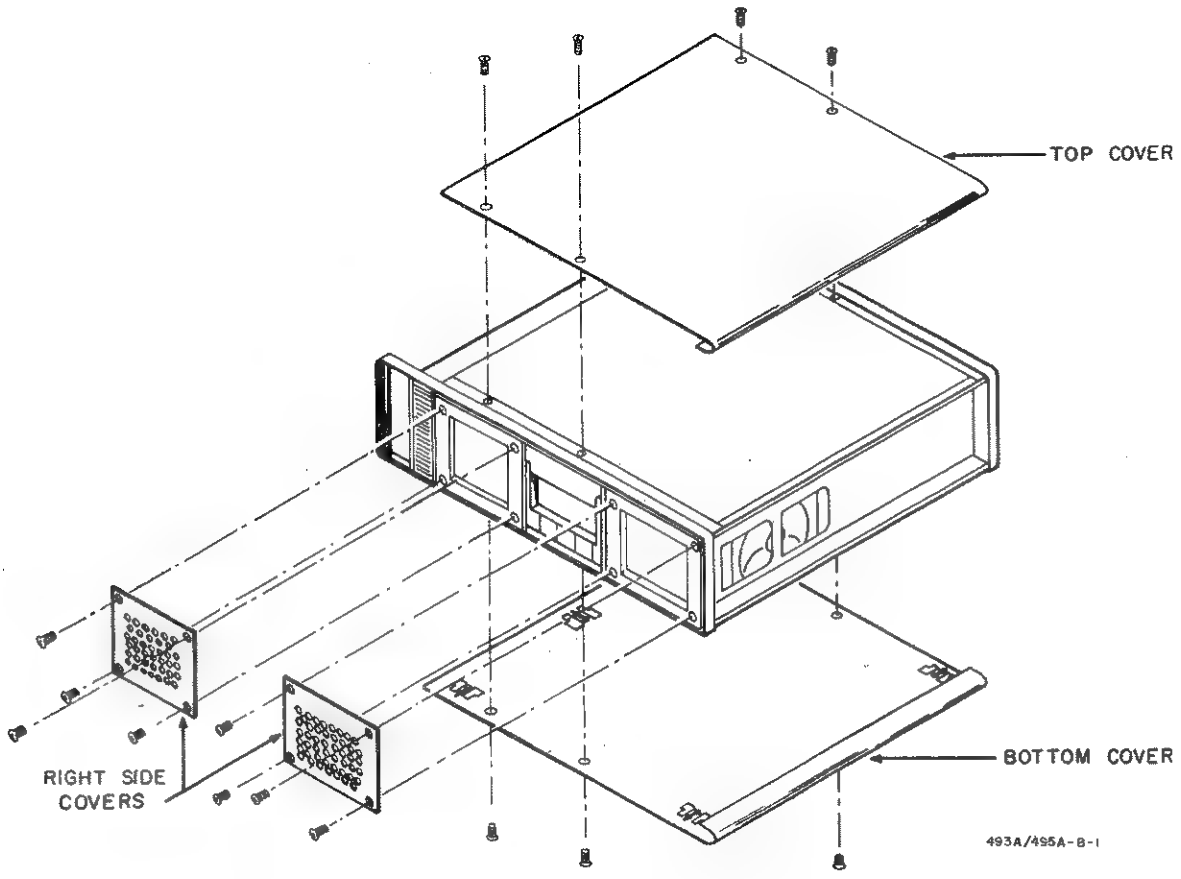

Figure 5-1. Cover Removal

5-10. TEST EQUIPMENT REQUIRED.

5-11. Test equipment used in the calibration of the Model 493A is given in table 5-1, Test Equipment Required. The table includes the type of equipment to be used, the critical specifications required for testing, where test equipment is used, and recommended commerically available test equipment used in the calibration of the instrument.

5-12. TROUBLESHOOTING PROCEDURE.

5-13. The troubleshooting procedure localizes troubles to a section (twt, high voltage power supply, or modulator). Troubles that usually arise affect power amplification or modulation. The following procedure lists checks to be made, voltage limits, and references to adjustment procedures. Voltage limits for collector/helix, anode and grid refer to values stamped on the twt capsule. If a voltage cannot be adjusted within the limits given, use the troubleshooting chart (figure 5-2) as a guide to isolate the cause of trouble.

CAUTION

Do not operate instrument without fan duct and covers for long periods of time. Cover is needed to maintain ambient temperature of the instrument below 35°C.

a. TWT filament voltage 6.2 ±0.1 volts (para 5-24).

b. Collector/helix voltage ±10% (para 5-25).

c. Anode voltage ±10% (para 5-26).

d. Grid voltage ±1 volt (para 5-28) check:

(1) -350 volts ±2 volts applied to modulator.

(2) 300 volts ±10 volts applied to modulator.

(3) R418, gain limit adj.

(4) Current sink, Q401.

e. Frequency response and bandwidth of modulator (paragraphs 5-32 and 5-33).

f. V403 and V404.

Note

Any change in collector/helix voltage causes a proportional change in anode voltage. Following repair or adjustment of collector/helix voltage, adjust anode voltage and check for proper grid voltage.

5-14. REPAIR.

5-15. The Model 493A uses etched circuit boards. A special procedure is required to repair or replace components on the boards. The procedure for repairing the circuit boards is given below.

5-16. ℌ uses three types of etched circuit boards: the single sided, double sided, and plated through circuit board. Soldering techniques vary for each. Regardless of which board is used, these general rules should be followed.

a. Take care not to apply excessive heat to the conductor or component being soldered.

b. Use a toothpick to clean holes before inserting new component.

c. To remove damaged component, clip component leads near component. Then apply heat and remove each component lead with a straight upward motion.

d. After replacing a component, the printed circuit board should be sprayed with a clear plastic such as Krylon.

5-17. SINGLE SIDED BOARD: The single sided etched circuit board consists of a base board, funneled eyelets, and conductor. TO INSURE GOOD CONNECTION BETWEEN THE EYELET AND CONDUCTOR, SOLDER FROM CONDUCTOR SIDE.

5-18. DOUBLE SIDED BOARD: The double sided etched circuit board consists of a base board, funneled eyelets and conductors located on both sides of the board. TO INSURE GOOD CONNECTION BETWEEN THE EYELETS AND CONDUCTOR, APPLY SOLDER FROM BOTH SIDES OF THE BOARD.

5-19. PLATED THROUGH BOARD: The plated through etched circuit board consists of a base board and conductor. The board does not include funneled eyelets. The conductor material is plated to the walls of the hole and effectively the conductor is extended into the hole. THIS TYPE OF BOARD CAN BE SOLDERED FROM EITHER THE CONDUCTOR OR COMPONENT SIDE WITH EQUALLY GOOD RESULTS.

5-20. TWT REMOVAL.

a. Remove ac power cable from instrument.

b. Remove instrument's top and bottom covers (see paragraph 5-8, Panel Removal).

c. Remove fan air duct.

d. Disconnect twt leads from terminal board E1.

e. Return cables and type N Panel Connectors with tube. If input and output cables are detachable, disconnect them at the tube without disassembling type-N panel connectors. If the cables are not detachable, disassemble type-N connectors, remove from panel, re-assemble them, and return them with the tube.

f. Remove modulator plug-in A400.

g. Remove E1 mounting screw nearest ground terminal (E1A, Figure 5-3), and swing E1 assembly aside.

h. Place instrument on its side and remove four screws holding twt to main deck (see Figure 5-4).

i. Remove twt and refer to twt warranty claim sheet for packing instructions. Note: Fill out warranty claim completely and include reason for returning twt (e.g., low power, no power, etc.).

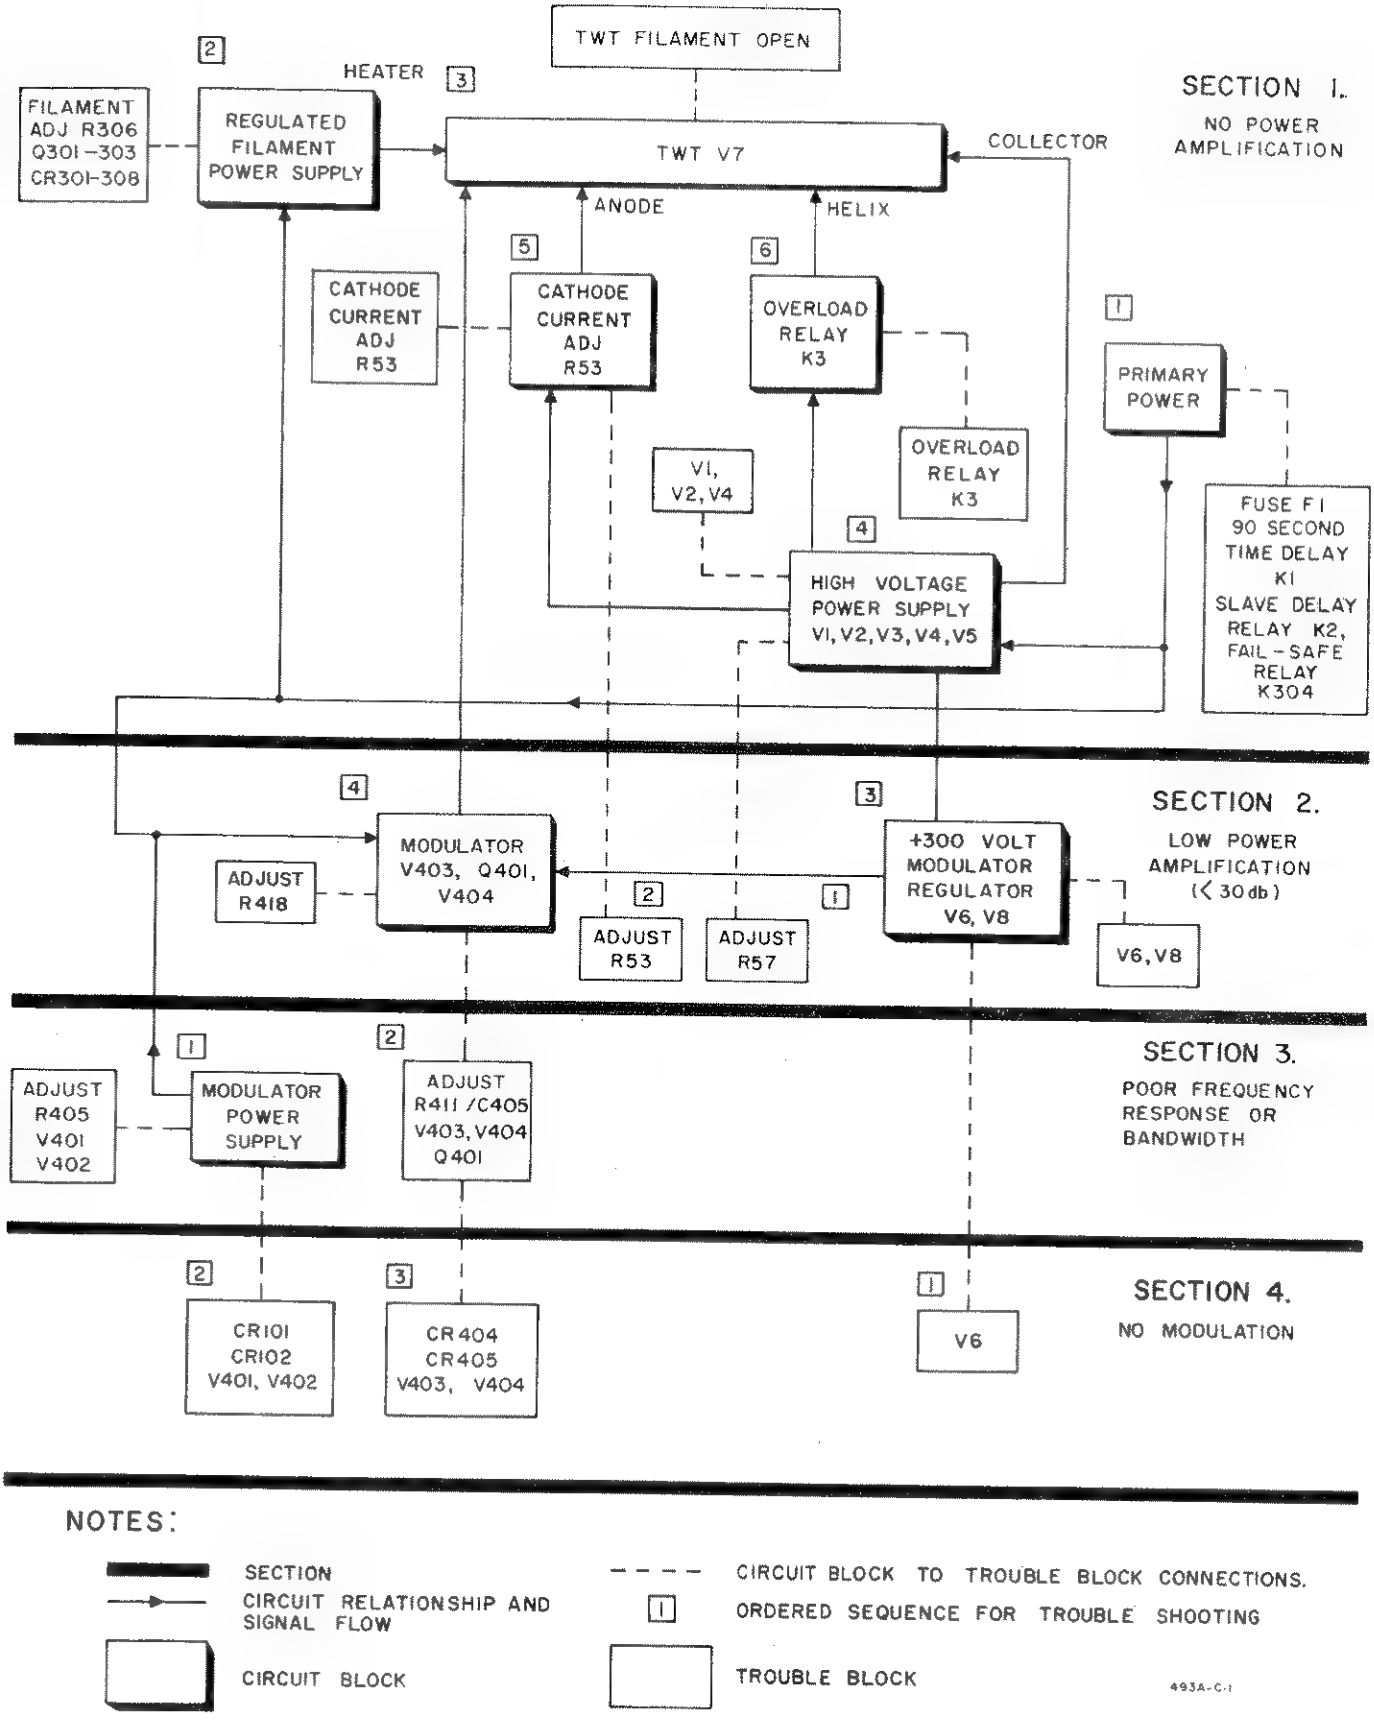

Figure 5-2. Troubleshooting Chart

5-21. TWT INSTALLATION.

a. Replace modulator board.

b. Before installing new TWT, adjust filament voltage to value stamped on TWT capsule with a 5-ohm, 5-watt load across filament circuit (see paragraph 5-24 FILAMENT ADJUSTMENT). Rough set -350 volt supply (measured between C401 and R431 and ground), collector/helix voltage, anode and grid voltage as instructed in paragraph 5-24 through 5-27.

c. Remove modulator board.

d. Install TWT.

e. Re-attach the E1 board to the instrument wall. Connect the TWT leads to terminal board E1.

f. Connect jumper wire between E1C (grey filament lead) and E1E (white cathode lead) on the E1 board. **All replacement tubes require the jumper between E1C and E1E. Connect the TWT lead to terminal board E1 as shown in table 5-2 and figure 5-3.**

g. **If the replacement tube is supplied with detachable input and output cables, remove the cables from the tube to avoid disassembling the type-N panel connectors. If the cables are not detachable, disassemble the type-N connectors to mount them in the panel.**

h. Repeat step f with the TWT **input** cable connector.

i. Replace modulator **board.**

j. Refer to paragraph 5-29 for optimizing TWT element voltages to obtain proper power amplification.

Note

The new modulator board, ℗ Stock No. 495A-65D, can be used with the old type TWT, ℗ Stock No. 1952-0016, if diode CR405, ℗ Stock No. 1901-0029, is installed between pin 1 of V404A and pin 6 of V404B.

k. Replace top and bottom cover.

Table 5-2. TWT Lead Identification

TWT Element	E1 Board Terminal	Color Lead
Collector	E1H	Refer to tube data sheet for proper identification of leads.
Helix	E1G	
Anode	E1F	
Cathode	E1E	
Grid	E1D	
Heater/Cathode	E1C	
Heater	E1B	
Ground	E1A	

5-22. TWT VOLTAGE ADJUSTMENTS.

5-23. Use this procedure when resetting TWT voltages or after installing a TWT. Note that adjustment of the collector/helix voltage affects anode voltage. When collector/helix adjustments are made, the anode voltage adjustment must also be made, if applicable.

CAUTION: The instrument should not be operated for long periods of time without fan duct and covers. Ambient temperature within the instrument will increase causing excessive helix current to flow. This will result in low power amplification and/or damage to TWT.

5-24. FILAMENT ADJUSTMENT.

a. Remove the instrument top cover (see para 5-8).

b. Rotate filament adjust R306, (figure 5-3) full counterclockwise.

c. Connect dc voltmeter between E1B and E1C (see figure 5-3). DC voltmeter to 10-volt range.

d. Set Model 493A power switch to STANDBY.

e. Adjust filament adjust R306, for 6.2 vdc.

f. Vary power line voltage from 103 to 127 vac. The dc voltmeter reading should not vary more than 6.2 ±0.1 volt.

Note

The filament voltage is factory adjusted to 6.2 volts dc. This will extend the filament life of the TWT considerably.

5-25. COLLECTOR/HELIX ADJUSTMENT.

a. Parallel an ac and dc voltmeter; connect between helix terminal (E1G) and ground (figure 5-3).

CAUTION: AC and dc voltmeter should be isolated to withstand 3000 volts.

b. Set Model 493A power switch to ON.

c. With the high voltage adj. R57, (figure 5-3) set the collector/helix voltage to the value stamped on the TWT capsule.

WARNING: High voltage is present on the high-voltage board A1 and the terminal board E1.

d. Vary power-line voltage from 103 to 127 vac; collector/helix voltage should not vary more than 5 volts; ripple voltage should not exceed 10 millivolts.

5-26. ANODE ADJUSTMENTS (If Applicable).

a. Parallel and ac and dc voltmeter; connect between anode terminal (E1F) and ground (figure 5-3).

b. With the cathode current adjust R53 (figure 5-3), **set anode voltage to value listed in TWT data sheet.**

Note

If the anode voltage range is not great enough to obtain anode voltage needed, R54 and R55 (see figure 5-12) can be interchanged to provide proper voltage range. This is assuming collector/helix voltage is set to the proper value.

c. Vary power-line voltage from 103 to 127 vac. Anode voltage should not vary more than 10 volts; ripple should not exceed 25 millivolts (measured on the TWT side of R203).

5-27. -350 VOLT ADJUSTMENT.

a. Parallel an ac and dc voltmeter; connect between junction of C401 and R431 (see figures 5-13 and 5-14) and ground.

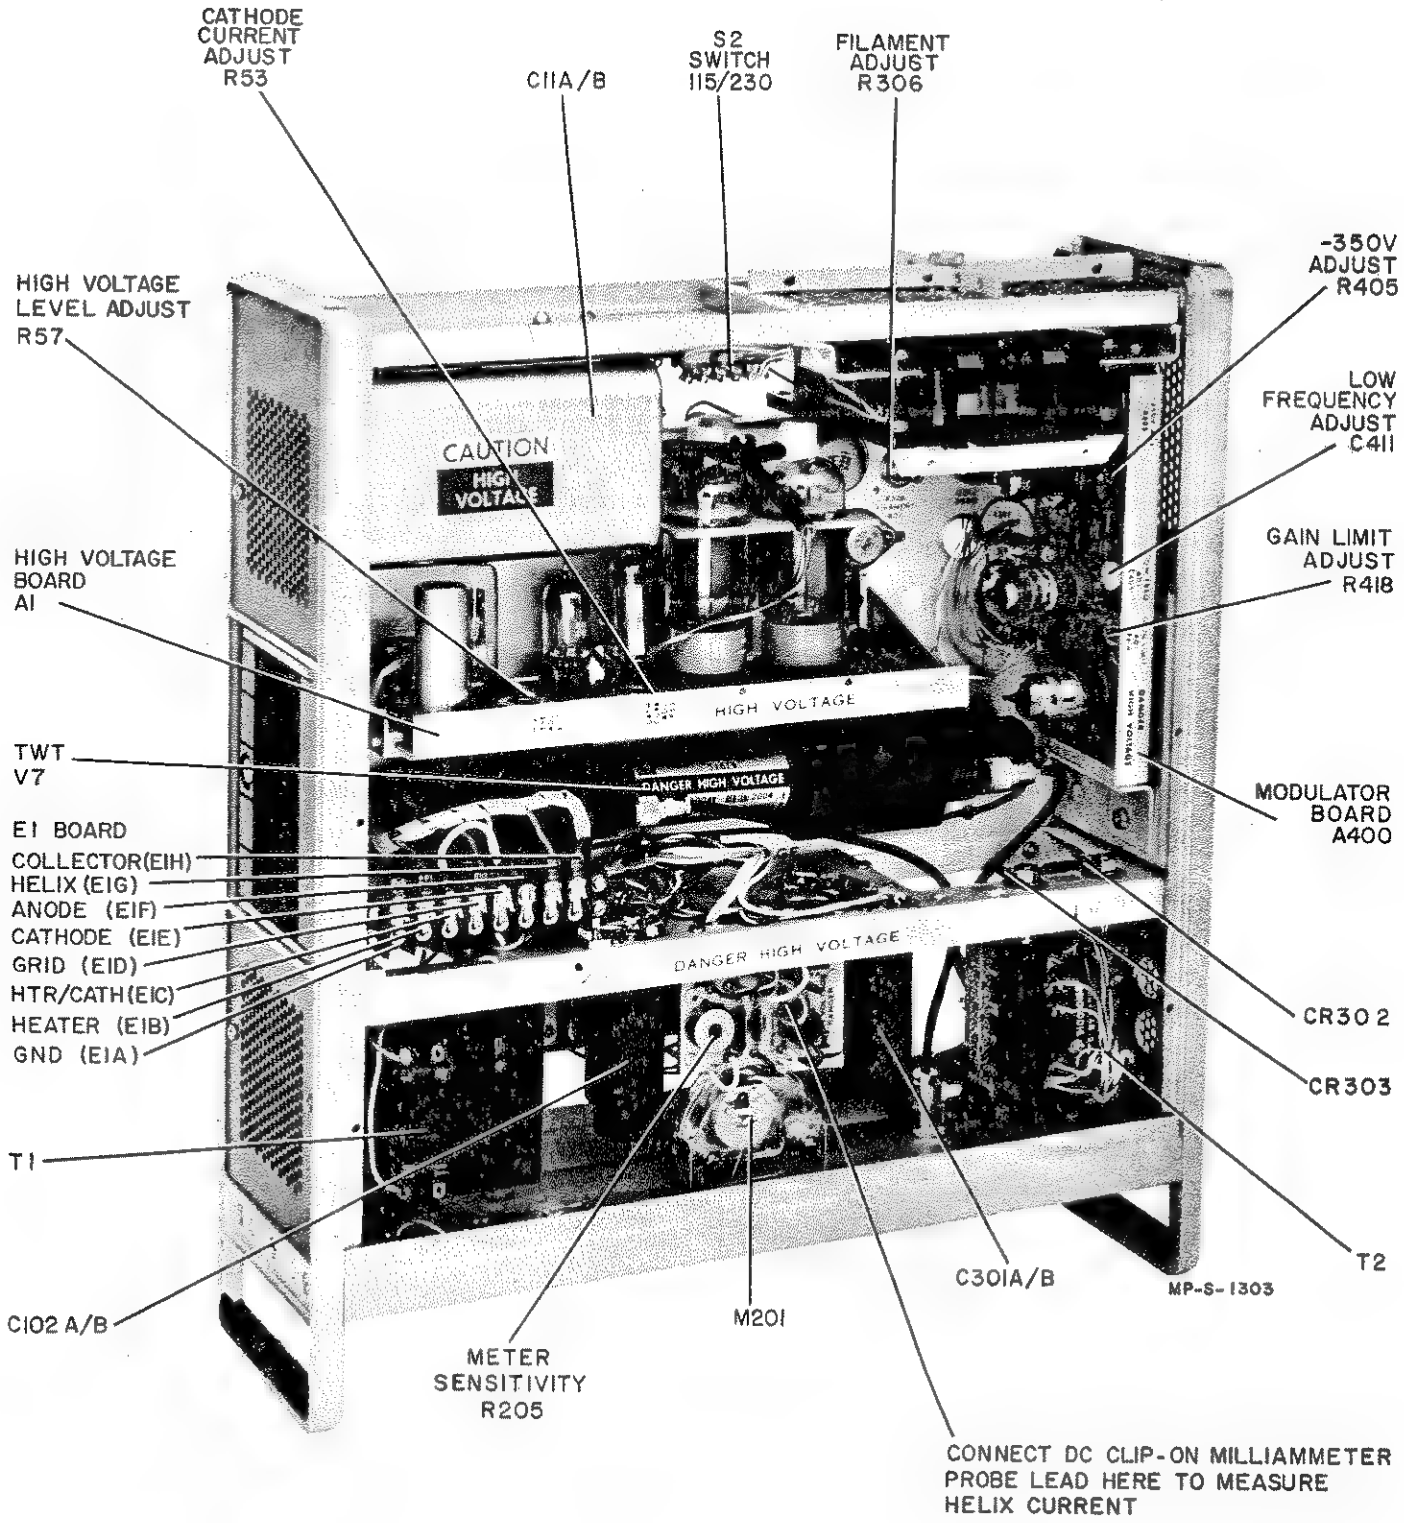

Figure 5-3. ℗ Model 493A Top View

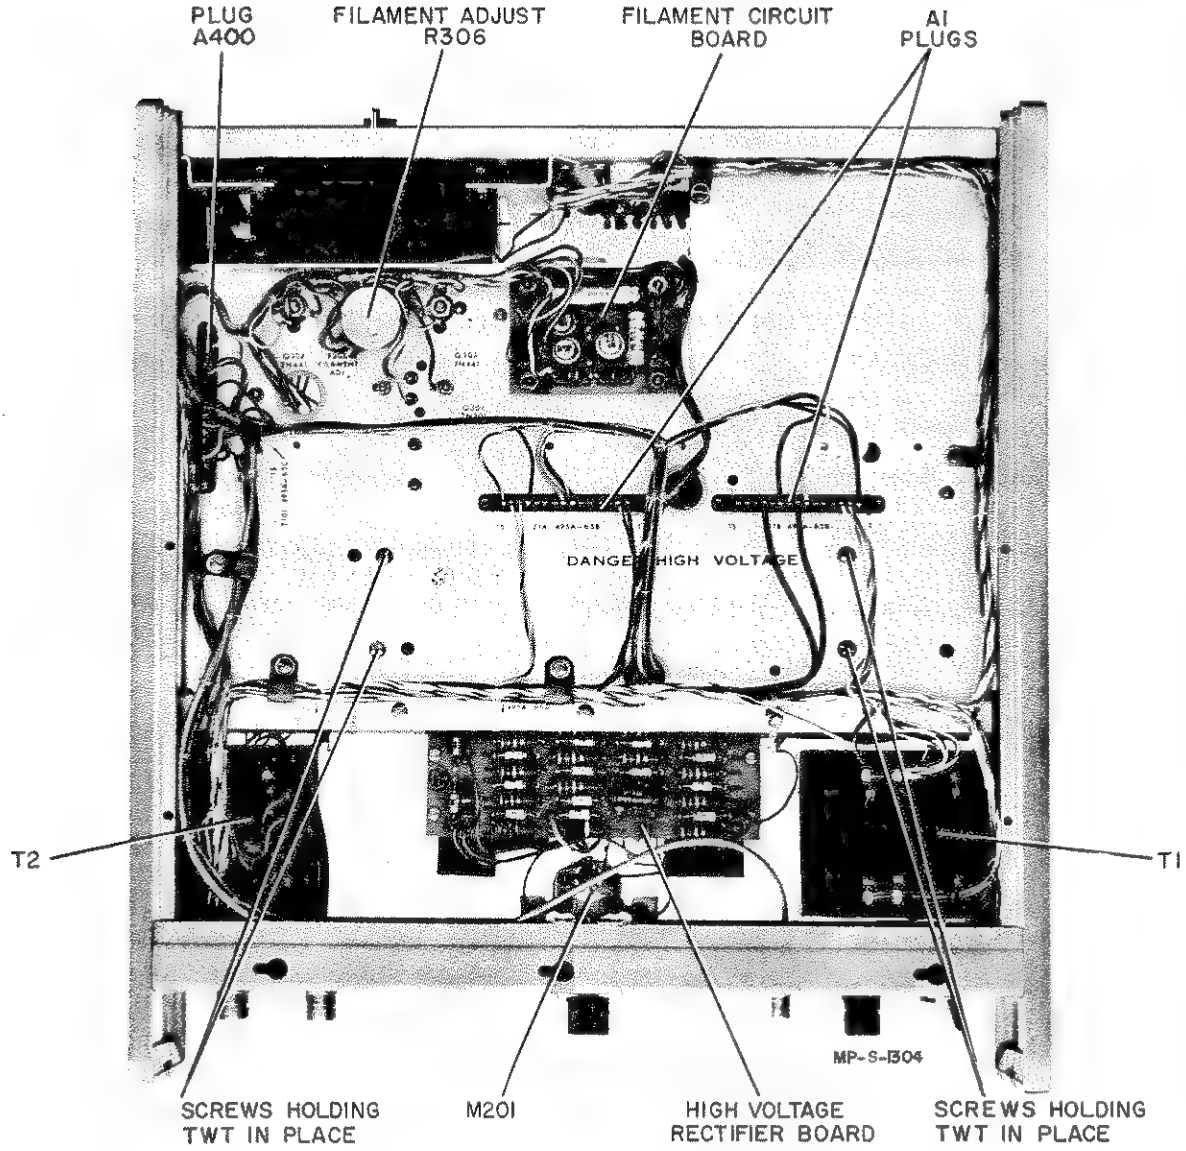

Figure 5-4. Ⓗ Model 493A Bottom View

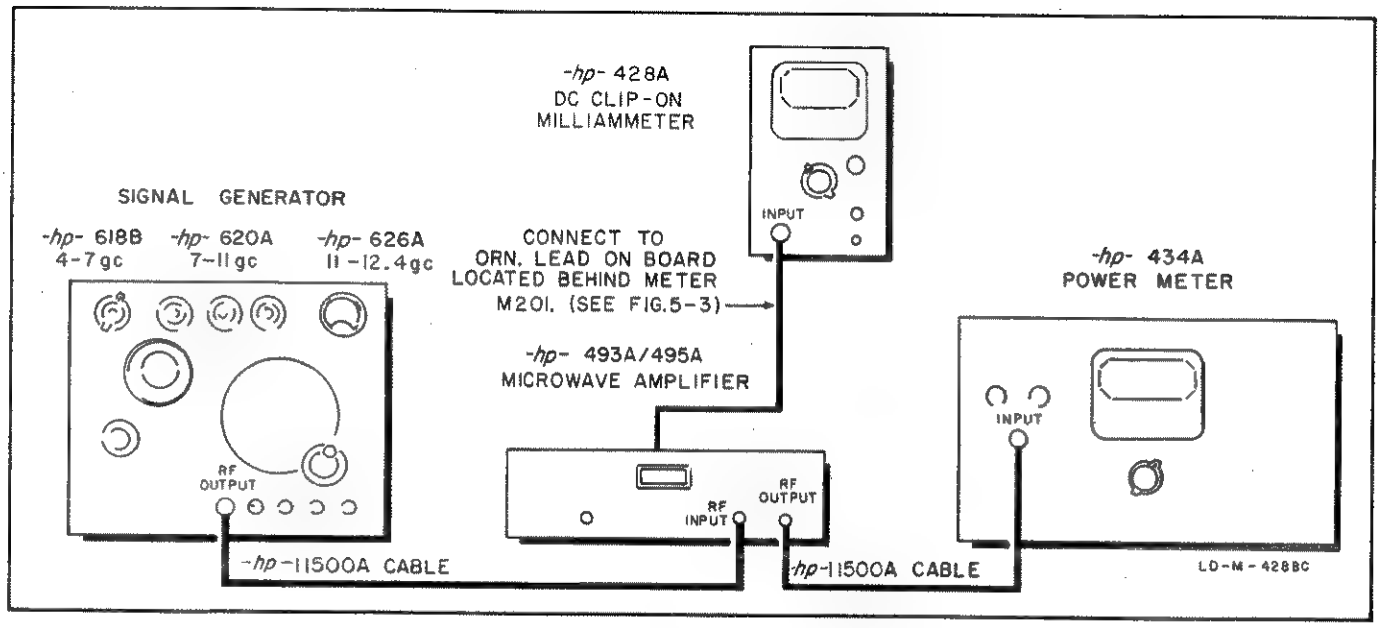

Figure 5-5. Power Amplification Setup

b. With the -350 volt adj. R405 (figure 5-3), set -350 volt regulated power supply to -350 volts.

c. Vary line voltage from 103 to 127 vac. The -350 volts should not vary more than ±3 volts; -350 volt-supply ripple voltage should be less than 10 millivolts.

d. Connect dc voltmeter between pin 12 of A400 and ground. Place the dc voltmeter on the +300 volt range and check +300 volts. Meter should read +300 volts ±10 volts. If not within the tolerance specified check V6 and V8. Then, if still out of specification replace R38 and R39.

e. Refer to para. 5-28, Gain Limit Adjustment.

5-28. GAIN LIMIT ADJUSTMENT.

a. Parallel an ac and a dc voltmeter; connect between grid terminal E1D and E1E (figure 5-3).

b. Rotate GAIN control full clockwise.

c. Adjust gain limit control R418, to voltage value stamped on twt capsule.

d. Vary power-line voltage from 103 to 127 vac. Grid voltage should not vary more than ±1.5 volts; ripple voltage should be less than 10 millivolts.

5-29. OPTIMIZING TWT ELEMENT VOLTAGES TO OBTAIN PROPER POWER AMPLIFICATION.

5-30. When all twt element voltages have been set, it may be necessary to go back and optimize the collector/helix anode and grid voltages to obtain the desired power amplification.

a. Set up the Model 493A as shown in figure 5-5.

b. Set up the signal generator for a 1 milliwatt output at twt low power point (8.0 gc for 493A, 12.4 gc for 495A).

Note

Make sure that the 1 milliwatt signal generator output includes the attenuation produced by the coaxial cable and that the losses in the cable running to the output power meter have been accounted for.

c. Microwave output power should be 1 watt or more. If it is not, optimize the collector/helix voltage (high voltage level adj. R57) for maximum power reading on the power meter.

d. Optimize grid voltage. If power at minimum power point is still less than 1 watt, increase anode voltage to produce an rf output of at least 1 watt.

e. Connect a dc clip-on milliammeter to the orange or yellow lead located on the board directly behind the current meter (see figure 5-3).

Note

Another method of measuring helix current is to place a VOM across R202. Since R202 is 1K, volts equal milliamperes.

f. Set signal generator frequency to low end of the band; optimize the GAIN control for maximum helix current. The helix current should be less than 4 ma.

g. If the helix current is greater than 4 ma or rf output power is still below 1 watt, re-optimize the collector/helix and grid voltage.

h. Adj. meter sensitivity control R205 for correct meter indication within meter Rated Power limit.

5-31. MODULATOR ADJUSTMENT.

5-32. FREQUENCY RESPONSE.

a. Connect the Model 493A/495A as shown in figure 5-6.

b. Rotate GAIN control full clockwise.

c. Set square-wave generator frequency to 10 kc and adjust square-wave generator amplitude for modulator output of 10 volts peak-to-peak.

d. Adjust high frequency adj. R411 (see figure 5-3), for optimum square-wave output. Rise time should be less than 0.8 μsec, overshoot less than 5%.

e. Set square-wave generator frequency to 1 kc; increase signal amplitude to produce a 100-volt peak-to-peak signal at the grid of the twt. Rise time should be less than 10 μsec, overshoot less than 5%.

5-33. BANDWIDTH.

a. Connect the Model 493A as shown in figure 5-7.

b. Set the sine-wave oscillator at 1 kc and adjust its output amplitude for a 10-volt peak-to-peak sine-wave output at the grid of the twt.

c. Increase the frequency of the sine-wave oscillator until the amplitude of the sine-wave voltage on the grid of the twt decreases to 7 volts peak-to-peak. Bandwidth specifications: 3 db variation from dc to 500 kc.

5-34. PERFORMANCE CHECK.

5-35. This performance check is an in-cabinet check that is used to check instrument specifications. All checks are made from the front panel. This procedure can also be used as an incoming or outgoing quality control check.

5-36. POWER AMPLIFICATION CHECK.

a. Refer to turn-on procedure, figure 3-1, and set up the Model 493A; set primary power switch to ON and allow the Model 493A to warm up for approximately 30 minutes.

b. Connect the Model 493A as shown in figure 5-5. Milliammeter not necessary for this check. Refer to table 5-1, Test Equipment Required.

c. Set up the signal generator for 1 mw cw output at 4.0 gc for 493A, 12.4 gc for 495A.

d. Set power meter to 3-watt range; zero-set the power meter.

e. Switch Model 493A primary power switch from STANDBY to ON.

f. Reading on power meter should be at least 1 watt. Specification: At least 1 watt at the output with application of 1 mw at the input. Remember to compensate for the losses in cable between the twt amplifier and the power meter.

5-37. GAIN CONTROL POWER ON-OFF RATIO.

a. Set up the Model 493A as shown in figure 5-8 (power supply power off). Signal generator set up for a 1 mw output at microwave amplifier low power point.

b. Rotate Model 493A GAIN control full counter-clockwise; record power meter reading.

c. Rotate Model 493A GAIN control full clockwise; record power meter reading. Difference between the two readings should be at least 20 db. Specifications: "Modulation On-Off Ratio". Power OUTPUT change should be at least 20 db with the GAIN control.

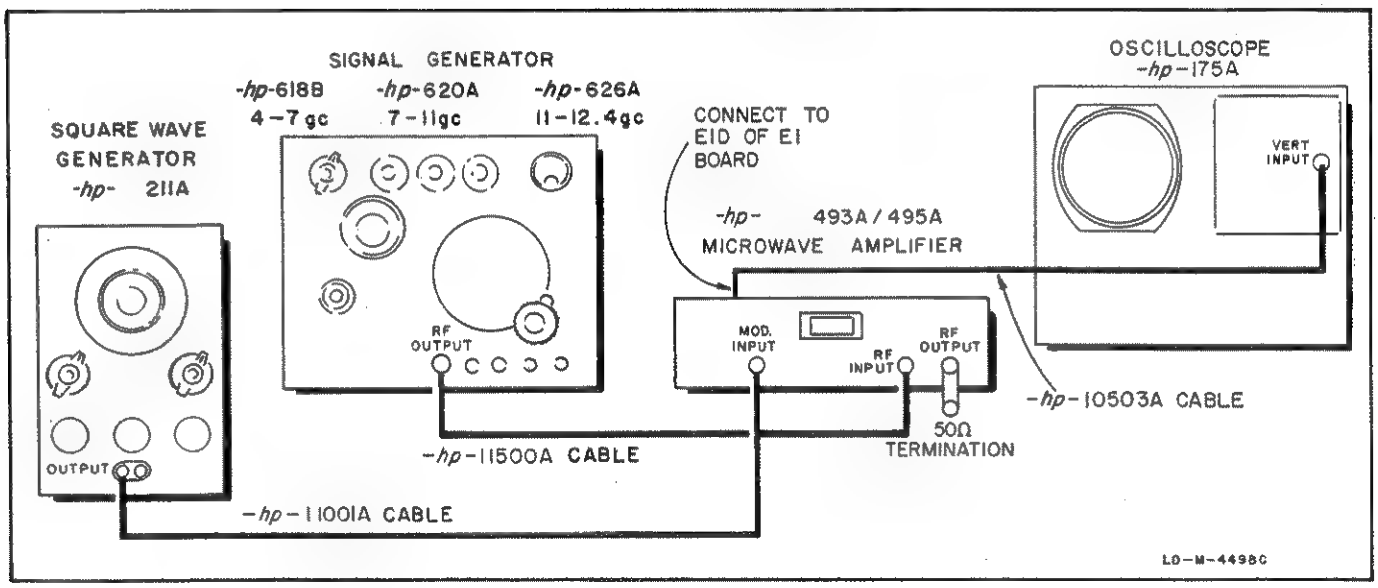

Figure 5-6. Frequency Response Setup

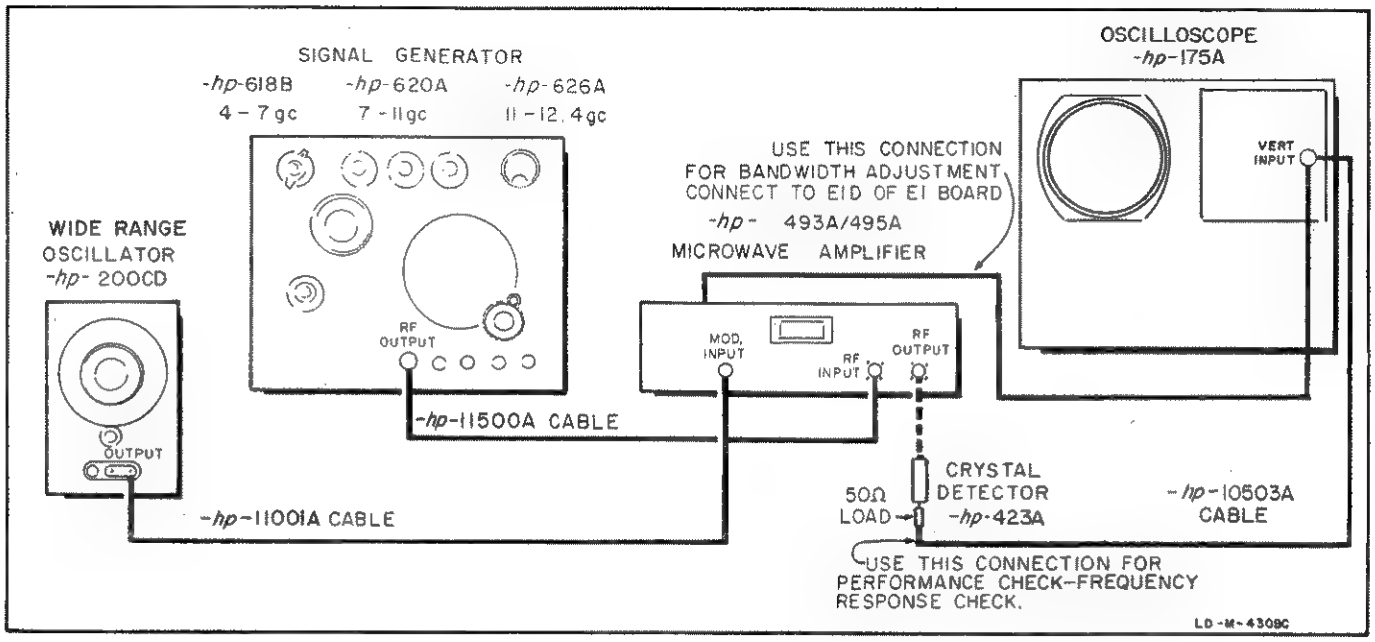

Figure 5-7. Bandwidth Setup

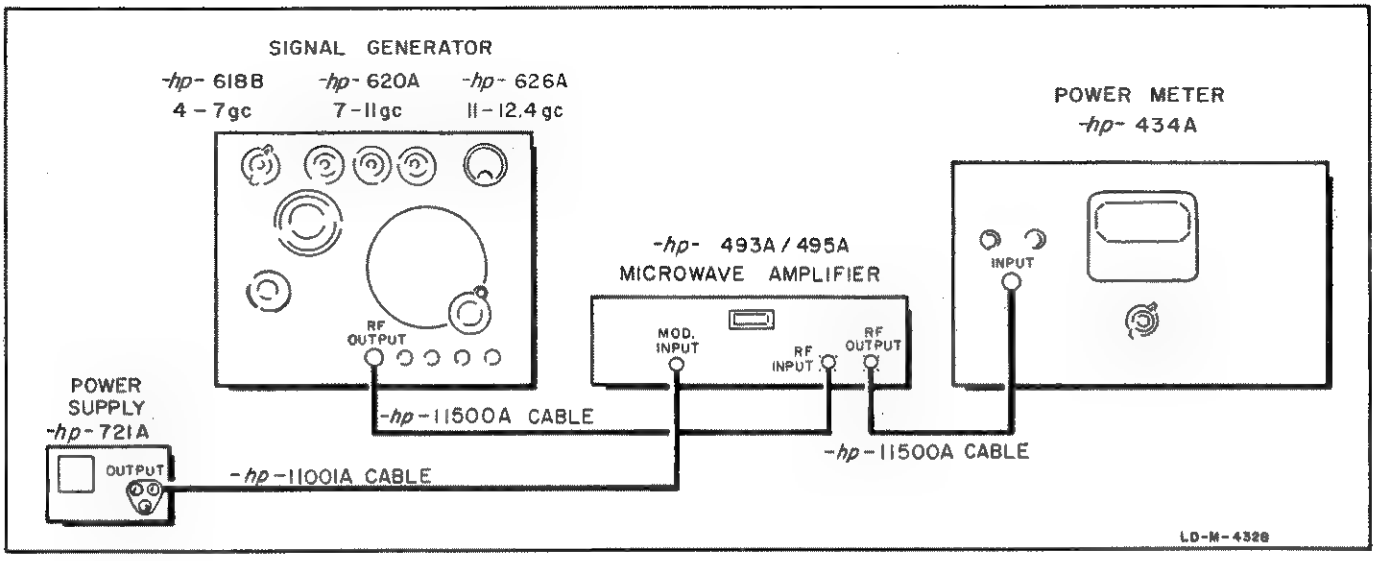

Figure 5-8. Modulator On-Off Ratio

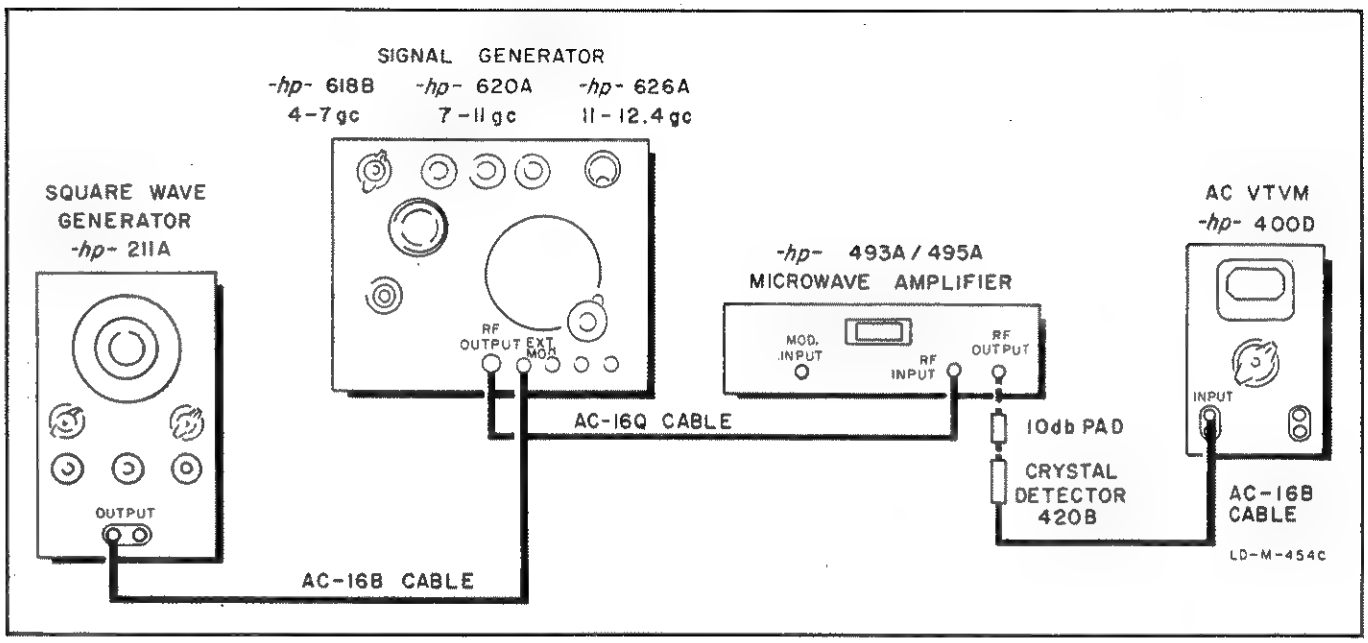

Figure 5-9. Residual AM Check

5-38. MODULATOR ON-OFF RATIO.

a. Connect the Model 493A as shown in figure 5-8, with the signal generator and the power meter at the same setting as those in paragraph 5-36 steps c and d.

b. Rotate the Model 493A GAIN control full clockwise.

c. Power supply output voltage to the Model 493A MOD INPUT, ZERO volts; record power meter reading.

d. Turn on power supply. Adjust for negative output. Increase power-supply output until power-meter reading is 20 db less than that recorded in step c. Power-supply voltage should be between 0 and -20 volts.

5-39. RESIDUAL AM CHECK.

a. Connect the Model 493A as shown in figure 5-9.

Note

Make sure the residual AM of the signal generator used to test the Model 493A is at least 45 db below signal level.

b. Set up the square-wave generator for 1 kc.

c. Signal generator output frequency 8 gc (12.4 gc for the Model 495A). Set generator MOD SELECTOR for EXT+ modulation.

d. Adjust INPUT power to Model 493A for 100 millivolts (-18 db) reading at the ac vtvm.

e. Set Signal Generator for CW output and record ac VTVM reading which should be less than -55 db.

Note

Readings taken on an average-reading voltmeter, such as hp Model 400D, require a +8 db correction factor to obtain the actual value of the residual AM. This +8 db factor accounts for a) the crystal square-law characteristic and b) the difference between average and peak values of square and sine waves. Thus, a -55 db ac vtvm reading includes the following: -10 db (-18 from step d plus 8 as explained above) produced by ac vtvm and crystal detector, and -45 db caused by residual AM.

5-40. MODULATOR FREQUENCY RESPONSE.

a. Connect the Model 493A as shown in figure 5-7.

b. Set Model 493A GAIN control full clockwise.

c. Set up the signal generator for -15 dbm output at 8 gc (12.4 gc for Model 495A).

d. Set up the wide range oscillator for a 1 volt peak-to-peak output at 1 kc.

e. Adjust the signal generator power output so that the detected 1 kc modulated signal on the oscilloscope is set to a reference level.

f. Set up the wide range oscillator for a 1 volt peak-to-peak output at 500 kc. The amplitude of the detected signal should not have dropped more than 3 db.

Specification: Less than 3 db small signal output variation dc to 500 kc.

5-41. SWR CHECK.

5-42. SWR of the rf input and output circuit is 3:1 or better, and normally need not be checked if the instrument meets gain and power output specifications.

5-43. If it is desired to check the swr, normal swr measuring techniques (i.e., slotted line or swept frequency reflectometer) can be employed. hp Application Note 54 (available from your hp Engineering Representative) describes new, improved swept frequency techniques for measurement of swr, etc.

Note

The dc resistance of the input and output circuits, when measured at the panel jacks from center conductor to ground, will read ∞. The 50 Ω impedance is achieved through transmission line coupling.

5-44. FREQUENCY RANGE CONVERSION.

a. Remove the twt from the instrument (see twt removal, paragraph 5-20).

b. Replace twt in the instrument with twt in the range desired (4 - 8 gc or 7 - 12.4 gc). See twt installation, paragraph 5-21.

Note

Conversion from one frequency range to another may require switching of high voltage transformer leads. Refer to "note" on regulated high voltage power supply schematic.

c. Refer to performance check procedure, paragraph 5-34 and check instrument for specifications.

d. Replace the identification plate on the instrument with one indicating the frequency range and model number of the new twt installed.

SECTION VI
REPLACEABLE PARTS

6-1. INTRODUCTION.

6-2. This section contains information for ordering replacement parts for instruments serial prefixed 350. For those with other prefixes, see Appendix II. Table 6-1 lists parts in alpha-numerical order of their reference designators and indicates the description and hp stock number of each part, together with any applicable notes. Table 6-2 lists parts in numerical order of their hp stock numbers and provides the following information on each part:

a. Description of the part (see list of abbreviations below).

b. Typical manufacturer of the part in a five-digit code; see list of manufacturers in Appendix I.

c. Manufacturer's stock number.

d. Total quantity used in the instrument (TQ col.).

6-3. Miscellaneous parts not indexed in Table 6-1 are listed at the end of the table.

6-4. ORDERING INFORMATION.

6-5. To order a replacement part, address order or inquiry to your nearest Hewlett-Packard field office (see maps at the rear of this manual).

6-6. Specify the following information for each part:

a. Model and complete serial number of instrument.

b. Hewlett-Packard stock number.

c. Circuit reference designator.

d. Description.

6-7. To order a part not listed in tables 6-1 and 6-2, give a complete description of the part and include its function and location.

REFERENCE DESIGNATORS

A	= assembly	F	= fuse	P	= plug	V	= vacuum tube, neon bulb, photocell, etc.
B	= motor	FL	= filter	Q	= transistor		
C	= capacitor	J	= jack	R	= resistor	W	= cable

TABLE 6-3.
CODE LIST OF MANUFACTURERS

The following code numbers are from the Federal Supply Code for Manufacturers Cataloging Handbooks H4-1 (Name to Code) and H4-2 (Code to Name) and their latest supplements. The date of revision and the date of the supplements used appear at the bottom of each page. Alphabetical codes have been arbitrarily assigned to suppliers not appearing in the H4 Handbooks.

Code No.	Manufacturer	Address
00000	U. S. A. Common	Any supplier of U. S.
00136	McCoy Electronics	Mount Holly Springs, Pa.
00213	Sage Electronics Corp.	Rochester, N. Y.
00287	Cemco Inc.	Danielson, Conn.
00334	Humidial	Colton, Calif.
00348	Microtron Co., Inc.	Valley Stream, N. Y.
00373	Garlock Inc., Electronics Products Div.	Camden, N. J.
00656	Aerovox Corp.	New Bedford, Mass.
00779	Amp. Inc.	Harrisburg, Pa.
00781	Aircraft Radio Corp.	Boonton, N. J.
00815	Northern Engineering Laboratories, Inc.	Burlington, Wis.
00853	Sangamo Electric Co., Pickens Div.	Pickens, S. C.
00866	Goe Engineering Co.	Los Angeles, Calif.
00891	Carl E. Holmes Corp.	Los Angeles, Calif.
00929	Microlab Inc.	Livingston, N. J.
01009	Alden Products Co.	Brockton, Mass.
01121	Allen Bradley Co.	Milwaukee, Wis.
01255	Litton Industries, Inc.	Beverly Hills, Calif.
01281	TRW Semiconductors, Inc.	Lawndale, Calif.
01295	Texas Instruments, Inc., Transistor Products Div.	Dallas, Texas
01349	The Alliance Mfg. Co.	Alliance, Ohio
01589	Pacific Relays, Inc.	Van Nuys, Calif.
01930	Amerock Corp.	Rockford, Ill.
01961	Pulse Engineering Co.	Santa Clara, Calif.
02114	Ferroxcube Corp. of America	Saugerties, N. Y.
02286	Cole Rubber and Plastics Inc.	Sunnyvale, Calif.
02660	Amphenol-Borg Electronics Corp.	Chicago, Ill.
02735	Radio Corp. of America, Semiconductor and Materials Div.	Somerville, N. J.
02771	Vocaline Co. of America, Inc.	Old Saybrook, Conn.
02777	Hopkins Engineering Co.	San Fernando, Calif.
03508	G. E. Semiconductor Prod. Dept.	Syracuse, N. Y.
03705	Apex Machine & Tool Co.	Dayton, Ohio
03797	Eldema Corp.	Compton, Calif.
03877	Transitron Electric Corp.	Wakefield, Mass.
03888	Pyrofilm Resistor Co., Inc.	Cedar Knolls, N. J.
03954	Singer Co., Diehl Div. Finderne Plant	Somerville, N. J.
04009	Arrow, Hart and Hegeman Elect. Co.	Hartford, Conn.
04013	Taurus Corp.	Lambertville, N. J.
04222	Hi-Q Division of Aerovox	Myrtle Beach, S. C.
04354	Precision Paper Tube Co.	Chicago, Ill.
04404	Dymec Division of Hewlett-Packard Co.	Palo Alto, Calif.
04651	Sylvania Electric Products, Microwave Device Div.	Mountain View, Calif.
04713	Motorola, Inc., Semiconductor Prod. Div.	Phoenix, Arizona
04732	Filtron Co., Inc. Western Div.	Culver City, Calif.
04773	Automatic Electric Co.	Northlake, Ill.
04796	Sequoia Wire Co.	Redwood City, Calif.
04811	Precision Coil Spring Co.	El Monte, Calif.
04870	P. M. Motor Company	Westchester, Ill.
05006	Twentieth Century Plastics, Inc.	Los Angeles, Calif.
05277	Westinghouse Electric Corp. Semi-Conductor Dept.	Youngwood, Pa.
05347	Ultronix, Inc.	San Mateo, Calif.
05593	Illumitronic Engineering Co.	Sunnyvale, Calif.
05616	Cosmo Plastic (c/o Electrical Spec. Co.)	Cleveland, Ohio
05624	Barber Colman Co.	Rockford, Ill.
05728	Tiffen Optical Co.	Roslyn Heights, Long Island, N. Y.
05729	Metro-Tel Corp.	Westbury, N. Y.
05783	Stewart Engineering Co.	Santa Cruz, Calif.
05820	Wakefield Engineering Inc.	Wakefield, Mass.
06004	Bassick Co., The	Bridgeport, Conn.
06090	Raychem Corp.	Redwood City, Calif.
06175	Bausch and Lomb Optical Co.	Rochester, N. Y.
06402	E. T. A. Products Co. of America	Chicago, Ill.
06540	Amatom Electronic Hardware Co., Inc.	New Rochelle, N. Y.
06555	Beede Electrical Instrument Co., Inc.	Penacook, N. H.
06666	General Devices Co., Inc.	Indianapolis, Ind.
06751	Semcor Div. Components Inc.	Phoenix, Ariz.
06812	Torrington Mfg. Co., West Div.	Van Nuys, Calif.
06980	Varian Assoc. Elmac Div.	San Carlos, Calif.
07088	Kelvin Electric Co.	Van Nuys, Calif.
07126	Digitran Co.	Pasadena, Calif.
07137	Transistor Electronics Corp.	Minneapolis, Minn.
07138	Westinghouse Electric Corp. Electronic Tube Div.	Elmira, N. Y.
07149	Filmohm Corp.	New York, N. Y.
07233	Cinch-Graphik Co.	City of Industry, Calif.
07261	Avnet Corp.	Culver City, Calif.
07263	Fairchild Camera & Inst. Corp. Semiconductor Div.	Mountain View, Calif.
07322	Minnesota Rubber Co.	Minneapolis, Minn.
07387	Bittcher Corp., The	Monterey Park, Calif.
07700	Technical Wire Products Inc.	Cranford, N. J.
07910	Continental Device Corp.	Hawthorne, Calif.
07933	Raytheon Mfg. Co., Semiconductor Div.	Mountain View, Calif.
07966	Shockley Semi-Conductor Laboratories	Palo Alto, Calif.
07980	Hewlett-Packard Co., Boonton Radio Div.	Rockaway, N. J.
08145	U. S. Engineering Co.	Los Angeles, Calif.
08289	Blinn, Delbert Co.	Pomona, Calif.
08358	Burgess Battery Co.	Niagara Falls, Ontario, Canada
08664	Bristol Co., The	Waterbury, Conn.
08717	Sloan Company	Sun Valley, Calif.
08718	ITT Cannon Electric Inc., Phoenix Div.	Phoenix, Arizona
08792	CBS Electronics Semiconductor Operations, Div of C. B. S. Inc.	Lowell, Mass.
08984	Mel-Rain	Indianapolis, Ind.
09026	Babcock Relays Div.	Costa Mesa, Calif.
09134	Texas Capacitor Co.	Houston, Texas
09145	Atohm Electronics	Sun Valley, Calif.
09250	Electro Assemblies, Inc.	Chicago, Ill.
09569	Mallory Battery Co. of Canada, Ltd.	Toronto, Ontario, Canada
10214	General Transistor Western Corp.	Los Angeles, Calif.
10411	Ti-Tal, Inc.	Berkeley, Calif.
10646	Carborundum Co.	Niagara Falls, N. Y.
11236	CTS of Berne, Inc.	Berne, Ind.
11237	Chicago Telephone of California, Inc.	So. Pasadena, Calif.
11242	Bay State Electronics Corp.	Waltham, Mass.
11312	Teledyne Inc., Microwave Div.	Palo Alto, Calif.
11534	Duncan Electronics Inc.	Costa Mesa, Calif.
11711	General Instrument Corp., Semiconductor Div., Products Group	Newark, N. J.
11717	Imperial Electronic, Inc.	Buena Park, Calif.
11870	Melabs, Inc.	Palo Alto, Calif.
12136	Philadelphia Handle Co.	Camden, N. J.
12697	Clarostat Mfg. Co.	Dover, N. H.
12859	Nippon Electric Co., Ltd.	Tokyo, Japan
12881	Metex Electronics Corp.	Clark, N. J.
12930	Delta Semiconductor Inc.	Newport Beach, Calif.
12954	Dickson Electronics Corp.	Scottsdale, Arizona
13103	Thermalloy	Dallas, Texas
13396	Telefunken (GmbH)	Hanover, Germany
13835	Midland-Wright Div. of Pacific Industries, Inc.	Kansas City, Kansas
14099	Sem-Tech	Newbury Park, Calif.
14193	Calif. Resistor Corp.	Santa Monica, Calif.
14298	American Components, Inc.	Conshohocken, Pa.
14433	ITT Semiconductor, A Div. of Int. Telephone & Telegraph Corp.	West Palm Beach, Fla.
14493	Hewlett-Packard Company	Loveland, Colo.
14655	Cornell Dublier Electric Corp.	Newark, N. J.
14674	Corning Glass Works	Corning, N. Y.
14752	Electro Cube Inc.	So. Pasadena, Calif.
14960	Williams Mfg. Co.	San Jose, Calif.
15203	Webster Electronics Co.	New York, N. Y.
15291	Adjustable Bushing Co.	N. Hollywood, Calif.
15558	Micron Electronics	Garden City, Long Island, N. Y.
15566	Amprobe Inst. Corp.	Lynbrook, N. Y.
15772	Twentieth Century Coil Spring Co.	Santa Clara, Calif.
15818	Amelco Inc.	Mt. View, Calif.
15909	Daven Div. Thomas A. Edison Ind. McGraw-Edison Co.	Long Island City, N. Y.
16037	Spruce Pine Mica Co.	Spruce Pine, N. C.
16179	Omni-Spectra Inc.	Detroit, Ill.
16352	Computer Diode Corp.	Lodi, N. J.
16688	Ideal Prec. Meter Co., Inc. De Jur Meter Div.	Brooklyn, N. Y.
16758	Delco Radio Div. of G.M. Corp.	Kokomo, Inc.
17109	Thermonetics Inc.	Canoga Park, Calif.
17474	Tranex Company	Mountain View, Calif.
17675	Hamlin Metal Products Corp.	Akron, Ohio
17745	Angstrohm Prec. Inc.	No. Hollywood, Calif.
18042	Power Design Pacific Inc.	Palo Alto, Calif.
18476	Ty-Car Mfg. Co., Inc.	Holliston, Mass.
18486	TRW Elect. Comp. Div.	Des Plaines, Ill.
18583	Curtis Instrument, Inc.	Mt. Kisco, N. Y.
18873	E. I. DuPont and Co., Inc.	Wilmington, Del.
18911	Durant Mfg. Co.	Milwaukee, Wis.
19315	Bendix Corp., The Eclipse-Pioneer Div.	Teterboro, N. J.
19500	Thomas A. Edison Industries, Div. of McGraw-Edison Co.	West Orange, N. J.
19644	LRC Electronics	Horseheads, N. Y.
19701	Electra Mfg. Co.	Independence, Kansas
20183	General Atronics Corp.	Philadelphia, Pa.
21226	Executone, Inc.	Long Island City, N. Y.
21335	Fafnir Bearing Co., The	New Britain, Conn.
21520	Fansteel Metallurgical Corp.	N. Chicago, Ill.
23783	British Radio Electronics Ltd.	Washington, D. C.
24455	G. E. Lamp Division	Nela Park, Cleveland, Ohio
24655	General Radio Co.	West Concord, Mass.
26365	Gries Reproducer Corp.	New Rochelle, N. Y.
26462	Grobet File Co. of America, Inc.	Carlstadt, N. J.
26992	Hamilton Watch Co.	Lancaster, Pa.
28480	Hewlett-Packard Co.	Palo Alto, Calif.
33173	G. E. Receiving Tube Dept.	Owensboro, Ky.
35434	Lectrohm Inc.	Chicago, Ill.
36196	Stanwyck Coil Products Ltd.	Hawkesbury, Ontario, Canada
37942	P. R. Mallory & Co. Inc.	Indianapolis, Ind.
39543	Mechanical Industries Prod. Co.	Akron, Ohio
40920	Miniature Precision Bearings, Inc.	Keene, N. H.
42190	Muter Co.	Chicago, Ill.
43990	C. A. Norgren Co.	Englewood, Colo.

Revised: July, 1966

TABLE 6-3.

CODE LIST OF MANUFACTURERS (Continued)

Code No.	Manufacturer	Address
44655	Ohmite Mfg. Co.	Skokie, Ill.
46384	Penn Eng. & Mfg. Corp.	Doylestown, Pa.
47904	Polaroid Corp.	Cambridge, Mass.
48620	Precision Thermometer & Inst. Co.	Southampton, Pa.
49956	Microwave & Power Tube Div.	Waltham, Mass.
52090	Rowan Controller Co.	Westminster, Md.
52983	Sanborn Company	Waltham, Mass.
54294	Shallcross Mfg. Co.	Selma, N.C.
55026	Simpson Electric Co.	Chicago, Ill.
55933	Sonotone Corp.	Elmsford, N.Y.
55938	Raytheon Co. Commercial Apparatus & Systems Div.	So. Norwalk, Conn.
56137	Spaulding Fibre Co., Inc.	Tonawanda, N.Y.
56289	Sprague Electric Co.	North Adams, Mass.
59446	Telex, Inc.	St. Paul, Minn.
59730	Thomas & Betts Co.	Elizabeth, N.J.
60741	Triplett Electrical Inst. Co.	Bluffton, Ohio
61775	Union Switch and Signal, Div. of Westinghouse Air Brake Co.	Pittsburgh, Pa.
62119	Universal Electric Co.	Owosso, Mich.
63743	Ward-Leonard Electric Co.	Mt. Vernon, N.Y.
64959	Western Electric Co., Inc.	New York, N.Y.
65092	Weston Inst. Inc. Weston-Newark	Newark, N.J.
66295	Wittek Mfg. Co.	Chicago, Ill.
66346	Revere Wollansak Div. Minn. Mining & Mfg. Co.	St. Paul, Minn.
70276	Allen Mfg. Co.	Hartford, Conn.
70318	Allmetal Screw Product Co., Inc.	Garden City, N.Y.
70485	Atlantic India Rubber Works, Inc.	Chicago, Ill.
70563	Amperite Co., Inc.	Union City, N.J.
70903	Belden Mfg. Co.	Chicago, Ill.
70998	Bird Electronic Corp.	Cleveland, Ohio
71002	Birnbach Radio Co.	New York, N.Y.
71041	Boston Gear Works Div. of Murray Co. of Texas	Quincy, Mass.
71218	Bud Radio, Inc.	Willoughby, Ohio
71286	Camloc Fastener Corp.	Paramus, N.J.
71313	Cardwell Condenser Corp.	Lindenhurst L.I., N.Y.
71400	Bussmann Mfg. Div. of McGraw-Edison Co.	St. Louis, Mo.
71436	Chicago Condenser Corp.	Chicago, Ill.
71447	Calif. Spring Co., Inc.	Pico-Rivera, Calif.
71450	CTS Corp.	Elkhart, Ind.
71468	ITT Cannon Electric Inc.	Los Angeles, Calif.
71471	Cinema Plant, Hi-Q Div. Aerovox Corp.	Burbank, Calif.
71482	C.P. Clare & Co.	Chicago, Ill.
71590	Centralab Div. of Globe Union Inc.	Milwaukee, Wis.
71616	Commercial Plastics Co.	Chicago, Ill.
71700	Cornish Wire Co., The	New York, N.Y.
71707	Coto Coil Co., Inc.	Providence, R.I.
71744	Chicago Miniature Lamp Works	Chicago, Ill.
71753	A.O. Smith Corp., Crowley Div.	West Orange, N.J.
71785	Cinch Mfg. Co., Howard B. Jones Div.	Chicago, Ill.
71984	Dow Corning Corp.	Midland, Mich.
72136	Electro Motive Mfg. Co., Inc.	Willimantic, Conn.
72354	John E. Fast Co., Div. Victoreen Instr. Co.	Chicago, Ill.
72619	Dialight Corp.	Brooklyn, N.Y.
72656	Indiana General Corp., Electronics Div.	Keasby, N.J.
72699	General Instrument Corp., Cap. Div.	Newark, N.J.
72765	Drake Mfg. Co.	Chicago, Ill.
72825	Hugh H. Eby Inc.	Philadelphia, Pa.
72928	Gudeman Co.	Chicago, Ill.
72964	Robert M. Hadley Co.	Los Angeles, Calif.
72982	Erie Technological Products, Inc.	Erie, Pa.
73061	Hansen Mfg. Co., Inc.	Princeton, Ind.
73076	H.M. Harper Co.	Chicago, Ill.
73138	Helipot Div. of Beckman Inst., Inc.	Fullerton, Calif.
73293	Hughes Products Division of Hughes Aircraft Co.	Newport Beach, Calif.
73445	Amperex Electronic Co., Div. of North American Phillips Co., Inc.	Hicksville, N.Y.
73506	Bradley Semiconductor Corp.	New Haven, Conn.
73559	Carling Electric, Inc.	Hartford, Conn.
73682	George K. Garrett Co., Div. MSL Industries Inc.	Philadelphia, Pa.
73734	Federal Screw Products Inc.	Chicago, Ill.
73743	Fischer Special Mfg. Co.	Cincinnati, Ohio
73793	General Industries Co., The	Elyria, Ohio
73846	Goshen Stamping & Tool Co.	Goshen, Ind.
73899	JFD Electronics Corp.	Brooklyn, N.Y.
73905	Jennings Radio Mfg. Corp.	San Jose, Calif.
74276	Signalite Inc.	Neptune, N.J.
74455	J.H. Winns, and Sons	Winchester, Mass.
74861	Industrial Condenser Corp.	Chicago, Ill.
74868	R.F. Products Division of Amphenol-Borg Electronics Corp.	Danbury, Conn.
74970	E.F. Johnson Co.	Waseca, Minn.
75042	International Resistance Co.	Philadelphia, Pa.
75378	CTS Knights Inc.	Sandwich, Ill.
75382	Kulka Electric Corporation	Mt. Vernon, N.Y.
75818	Lenz Electric Mfg. Co.	Chicago, Ill.
75915	Littlefuse, Inc.	Des Plaines, Ill.
76005	Lord Mfg. Co.	Erie, Pa.
76210	C.W. Marwedel	San Francisco, Calif.
76487	James Millen Mfg. Co., Inc.	Malden, Mass.
76493	J.W. Miller Co.	Los Angeles, Calif.
76530	Cinch-Monadnock, Div. of United Carr Fastener Corp.	San Leandro, Calif.
76545	Mueller Electric Co.	Cleveland, Ohio
76703	National Union	Newark, N.J.
76854	Oak Manufacturing Co.	Crystal Lake, Ill.
77068	Bendix Corp., The Bendix Pacific Div.	N. Hollywood, Calif.
77075	Pacific Metals Co.	San Francisco, Calif.
77221	Phanostran Instrument and Electronic Co.	South Pasadena, Calif.
77252	Philadelphia Steel and Wire Corp.	Philadelphia, Pa.
77342	American Machine & Foundry Co. Potter & Brumfield Div.	Princeton, Ind.
77630	TRW Electronic Components Div.	Camden, N.J.
77638	General Instrument Corp., Rectifier Div.	Brooklyn, N.Y.
77764	Resistance Products Co.	Harrisburg, Pa.
77969	Rubbercraft Corp. of Calif.	Torrance, Calif.
78189	Shakeproof Division of Illinois Tool Works	Elgin, Ill.
78283	Signal Indicator Corp.	New York, N.Y.
78290	Struthers-Dunn Inc.	Pitman, N.J.
78452	Thompson-Bremer & Co.	Chicago, Ill.
78471	Tilley Mfg. Co.	San Francisco, Calif.
78488	Stackpole Carbon Co.	St. Marys, Pa.
78493	Standard Thomson Corp.	Waltham, Mass.
78553	Tinnerman Products, Inc.	Cleveland, Ohio
78790	Transformer Engineers	San Gabriel, Calif.
78947	Ucinite Co.	Newtonville, Mass.
79136	Waldes Kohinoor Inc.	Long Island City, N.Y.
79142	Veeder Root, Inc.	Hartford, Conn.
79251	Wenco Mfg. Co.	Chicago, Ill.
79727	Continental-Wirt Electronics Corp.	Philadelphia, Pa.
79963	Zierick Mfg. Corp.	New Rochelle, N.Y.
80031	Mepco Division of Sessions Clock Co.	Morristown, N.J.
80120	Schnitzer Alloy Products Co.	Elizabeth, N.J.
80130	Times Telephone Equipment	New York, N.Y.
80131	Electronic Industries Association. Any brand Tube meeting EIA Standards-Washington, DC.	
80207	Unimax Switch, Div. Maxon Electronics Corp.	Wallingford, Conn.
80223	United Transformer Corp.	New York, N.Y.
80248	Oxford Electric Corp.	Chicago, Ill.
80294	Bourns Inc.	Riverside, Calif.
80411	Acro Div. of Robertshaw Controls Co.	Columbus, Ohio
80486	All Star Products Inc.	Defiance, Ohio
80509	Avery Adhesive Label Corp.	Monrovia, Calif.
80583	Hammarlund Co., Inc.	New York, N.Y.
80640	Stevens, Arnold, Co., Inc.	Boston, Mass.
81030	International Instruments Inc.	Orange, Conn.
81073	Grayhill Co.	LaGrange, Ill.
81095	Triad Transformer Corp.	Venice, Calif.
81312	Winchester Elec. Div. Litton Ind., Inc.	Oakville, Conn.
81349	Military Specification	
81483	International Rectifier Corp.	El Segundo, Calif.
81541	Airpax Electronics, Inc.	Cambridge, Mass.
81860	Barry Controls, Div. Barry Wright Corp.	Watertown, Mass.
82042	Carter Precision Electric Co.	Skokie, Ill.
82047	Sperti Faraday Inc., Copper Hewitt Electric Div.	Hoboken, N.J.
82142	Jeffers Electronics Division of Speer Carbon Co.	Du Bois, Pa.
82170	Fairchild Camera & Inst. Corp. Defense Prod. Division	Clifton, N.J.
82209	Maguire Industries, Inc.	Greenwich, Conn.
82219	Sylvania Electric Prod. Inc. Electronic Tube Division	Emporium, Pa.
82376	Astron Corp.	East Newark, Harrison, N.J.
82389	Switchcraft, Inc.	Chicago, Ill.
82647	Metals & Controls Inc. Spencer Products	Attleboro, Mass.
82768	Phillips-Advance Control Co.	Joliet, Ill.
82866	Research Products Corp.	Madison, Wis.
82877	Rotron Mfg. Co., Inc.	Woodstock, N.Y.
82893	Vector Electronic Co.	Glendale, Calif.
83053	Western Washer Mfg. Co.	Los Angeles, Calif.
83058	Carr Fastener Co.	Cambridge, Mass.
83086	New Hampshire Ball Bearing, Inc.	Peterborough, N.H.
83125	General Instrument Corp., Capacitor Div.	Darlington, S.C.
83148	ITT Wire and Cable Div.	Los Angeles, Calif.
83186	Victory Engineering Corp.	Springfield, N.J.

MANUAL CHANGES

This manual describes Model 493A and 495A instruments with serial numbers prefixed 350-. Change the manual as indicated below for serials indicated. For other serials, either a different manual or a change sheet is required. If the prefix on your instrument is not specifically mentioned either here or on a change sheet, the correct information can be obtained from your Hewlett-Packard Field Office.

Instrument Serial Prefix	Make Manual Changes	Instrument Serial Prefix	Make Manual Changes
330-	1		
304-	1, 2		
229-, 207-, 151-	1, 2, 3		

CHANGE 1

The turn-on time-delay is 3 minutes rather than 90 seconds. Change reference to this delay in Figure 3-1, 4-5, 5-2, 5-10, and 5-11, and in paragraphs 4-24 and 4-25.

Tables 6-1 and 6-2: K1: Change ℌ Stock Number to 0490-0037 and Mfr. Part No. to 6N0180T.
R414: Change to R: fxd mtl flm 100K ohms 5% 1/2W; ℌ Stock No. 0758-0053; Mfr 07115; Mfr. Part No. C20; TQ 1.
Delete: ℌ Stock No. 0758-0076

WARRANTY CLAIM AND ADJUSTMENT PROCEDURE

for microwave tubes supplied by the
HEWLETT-PACKARD COMPANY
for use in Hewlett-Packard instruments

The procedure described below is for use within the United States. For warranty claims arising outside the U.S.A., before returning the tube, fill out the form on the reverse side and send it with a request for shipping instructions to your nearest Hewlett-Packard Sales and Service Office or to:

(in Western Europe)

Hewlett-Packard S.A.
54 Route des Acacias
Geneva, Switzerland
Telephone: (022) 42.81.50
Telex: 2.24.86
Cable: HEWPACKSA

(Rest of World)

Hewlett-Packard Co.
International Marketing Dept.
1501 Page Mill Road
Palo Alto, California, 94304, U.S.A.
Telephone: (415) 326-7000
Telex: 033811
Cable: HEWPACK

Microwave tubes supplied by the Hewlett-Packard Company, either as original or replacement, for use in Hewlett-Packard instruments are actually warranted by the tube manufacturer and not by Hewlett-Packard. However, all warranty claims on tubes obtained from us either as original or replacement will be processed by Hewlett-Packard.

In the event of failure you should purchase a new tube and return your old tube immediately to Hewlett-Packard. Credit allowances will be passed on to you upon receipt of the defective tube.

For your convenience, warranty claims for all microwave tubes supplied by the Hewlett-Packard Company may be made on this single form; merely fill out the information on the reverse side and return this form, along with the defective tube, to your Hewlett-Packard Sales and Service Office or to Hewlett-Packard. Please be sure each space on the form is filled in--lack of complete information may delay processing of your claim.

Each tube manufacturer has his own warranty policy. Copies of individual Conditions of Warranty are available from your Hewlett-Packard Sales and Service Office or from the Hewlett-Packard Company.

SHIPPING INSTRUCTIONS

The following instructions are included to aid you in preventing damage in transit. Package your tube carefully--no allowance can be made on broken tubes.

1. Carefully wrap tube in 1/4-inch thick cellulosic cushioning, cotton batting, or other soft padding material. Cable assemblies and other accessories not rigidly mounted to the tube should be padded and wrapped separately to prevent damage to the tube during shipment.
2. Wrap the above in heavy kraft paper.
3. Pack in a rigid container which is at least 4 inches larger than the tube in each dimension.
4. Surround the tube with at least 2 inches of shock absorbing material. Be certain that the packing is tight all around the tube.
5. Tubes returned from outside the continental United States should be packed in a wooden box.
6. Mark container FRAGILE and ship prepaid via Air freight or Railway Express. Do not ship via Parcel Post or Air Parcel Post since experience has shown that fragile items are more apt to be damaged when shipped by these means.

Note

Tubes with permanent magnets can interfere with magnetic compasses.
For air shipment plainly mark container: "MAGNETIZED MATERIAL"

In warranty tubes purchased from Hewlett-Packard may be returned, with a completed warranty Claim Form, to your local Hewlett-Packard Sales and Service Office, or to:

Hewlett-Packard Company
Customer Service Center
333 Logue Avenue
Mountain View, California 94040
USA

ERRATA:

On the title page, add: Manual Stock No. 00493-90004.

Page 1-0, Table 1-1, under AMPLITUDE MODULATION.

Change Sensitivity specification to read, "A modulation input of —20V peak or greater reduces the RF output by more than 20 dB from dc to 50kHz. Above 50kHz, modulation decreases approximately 6 dB per octave."

Under GAIN VARIATION WITH FREQUENCY:

Change Small Signal specification to read, "5 dB or less across any 10% of the band, except the 495A, which is across any 300MHz of the band, 10 dB or less across the band, except the 493A, which is 12 dB or less across the band."

Page 4-6:

Delete all entries, (reprint of previous page.)

Page 5-14, Figure 5-11:

Indicate location provided for R69 (beside R34), and indicate location provided for R66 (beside C16).

Page 5-15, Figure 5-12:

Indicate on schematic that R66 and R69 are selected for correct Helix overload trip current. R69 is connected between pin 4 of helix relay K3 and the junction of resistors R37 and R68. Complete the connection between terminals E1C and E1E.

Delete Notes 6 and 7.

Add Pin 7 beside the ORN lead of T1 and change the voltage table below to show the BLU lead to pin 10 for 1800-2400 volts, pin 11 for 2400-2700 volts (the ORN lead remains connected to pin 7).

R53: Change "MEC" to read "anode type".

TWT V7: Delete wire colors and references to SYL TWT and MEC TWT.

Page 5-16, 5-17, Figures 5-13 and 5-14:

Change note for CR405 to read "install for tubes having negative grid voltage".

Page 6-6, Table 6-1:

Change V403 and V404 to Electron Tube: Triode-Pentode 6U8, HP Part No. 1943-0014.

Page 6-7, Table 6-1:

Change Frame in MISCELLANEOUS to HP Part No. 5060-0732.

Add Conditions of Warranty page attached.

►Page 1-0, Table 1-1:

Accessories Furnished:

Delete all references to Rack Mounting Kit.

Accessories Available:

Add: "A Rack Mounting Kit is available to install the instrument in a 19-inch rack. Rack Mounting Kits may be obtained through your nearest Hewlett-Packard Office by ordering HP Part Number 5060-8740."

CHANGE 1:

Page 6-5, Table 6-1: Change R417 to HP Part No. 0727-0236.

Page 6-6, Table 6-1: Change T2 to HP Part No. 9100-0299.

CHANGE 2:

Page 6-6, Table 6-1: Delete the existing reference to V7 and replace with the following:

V7 1952-0017 Electron Tube: TWT 4-8 GHz, MEC (493A only)

V7 1952-0022 Electron Tube: TWT 4-8 GHz, MA (493A only)

V7 1952-0019 Electron Tube: TWT 7-12.4 GHz, MEC (495A only)

V7 1952-0023 Electron Tube: TWT 7-12.4 GHz, MA (495A only)

Page 6-10, Table 6-2: Delete entries for 1952-0010, 1952-0016, 1952-0017 and 1952-0019 and replace with the following:

1952-0017 Electron Tube: TWT 4-8 GHz (493A only) 11312 MEC M4278C

1952-0019 Electron Tube: TWT 7-12.4 GHz (495A only) 11312 MEC M4273C

1952-0022 Electron Tube: TWT 4-8 GHz (493A only) 96341 MA 2344
1952-0023 Electron Tube: TWT 7-12.4 GHz (495A only) 96341 MA 2345G

CHANGE 3:

Figure 5-3 and Parts List (Model 495A only): An Air Duct Assembly, HP Part No. 00495-6001 is mounted between the fan housing (above FILAMENT adjust R306) and the TWT, V7. This air duct assembly is shown in Figure 1. Note the duct is straight for the MEC TWT, and bent to an angle with the flap inserted for the MA TWT. In each case, the air flow is forced directly onto the TWT collector. Included in the 00495-6001 assembly is a finger guard which is to be used in place of the air filter and should be mounted onto the fan behind the rear panel. This finger guard is available separately as HP Part No. 3160-0099.

Page 5-12, paragraph 5-44 (both Models 493A and 495A):
Add introductory paragraphs to read:
"To change a Model 493A (4-8GHz) to the 7-12.4 GHz frequency range, the 00495-6001 Air Duct Assembly must be installed, and is included as part of the Replacement Kit, TWT, HP Part No. 495A-95A.
To change a Model 495A (7-12.4 GHz) to the 4-8 GHz frequency range, the following two parts must be ordered: Bracket, Fan Mounting, HP Part No. 489A-85B (includes 493A-type air duct). The 00495-6001 Air Duct Assembly included in the 495A is not used with the 4-8 GHz frequency range TWT."
Page 6-7, Table 6-1: Parts List, under MISCELLANEOUS.
Delete HP Part No. 3150-0019 Air Filter (495A only).

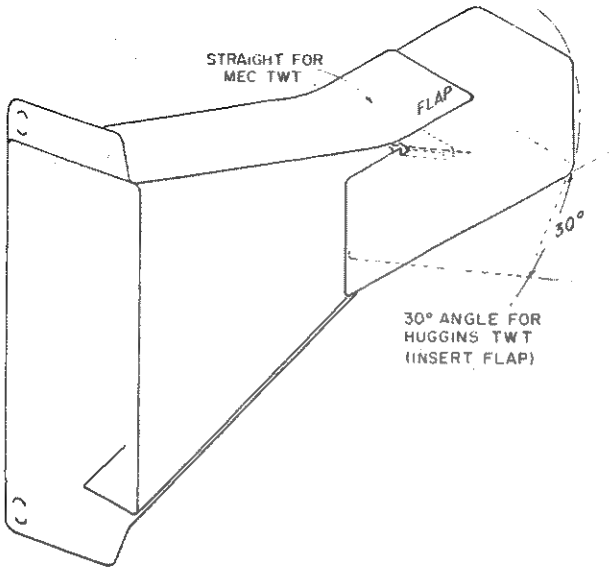

Figure 1. Model 495A Air Duct Assy, 00495-6001

CHANGE 4:

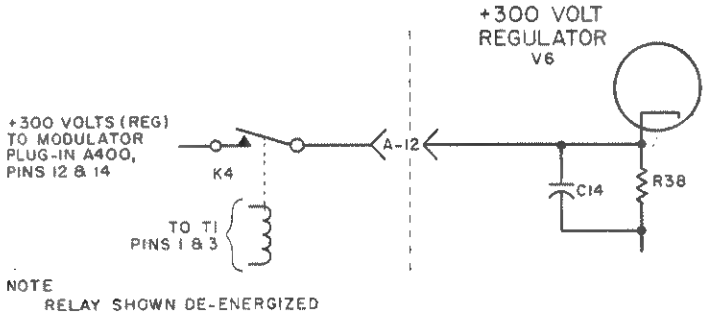
Page 6-2, Table 6-1: Change A200 Assembly to HP Part No. 489A-65E.
Page 6-5, Table 6-1: Change R205 to HP Part No. 2100-1767.

CHANGE 5:

Page 6-3, Table 6-1: Change K2 to HP Part No. 0490-0746.
Under K2 listing, add:
Relay Socket, HP Part No. 0490-0751.
Relay Retainer, HP Part No. 0490-0750.

CHANGE 6:

Page 5-6, Figure 5-3: Replace existing Figure 5-3 with attached copy.
Page 5-15, Figure 5-12: Add chassis part K4.



Connect as shown in partial schematic below:

Page 6-3, Table 6-1: Add K4, HP Part No. 0490-0026.

Page 5-17, Figure 5-14 and Page 6-3, Table 6-1: Add chassis part CR103, Diode: Silicon, HP Part No. 1901-0033. On schematic, connect CR103 anode to A400 pin 8 and cathode to ground.

Page 5-17, Figure 5-14 and Page 6-5, Table 6-1:
Change R414 to 33.2K ohm, HP Part No. 0757-0044.
Change R421 to 2.87 Megohm, HP Part No. 0727-0286.

CHANGE 7:

Page 5-15, Figure 5-12 and Page 6-4, Table 6-1:
Change R38 to R: FXD, MET FILM, 988K ohm, 1% 1/2W, HP Part No. 0698-3545.
Change R39 to R:FXD, MET FILM, 1.1 Megohm, 1%, 1/2W, HP Part No. 0757-0139.
Change R54 to R:FXD, MET FILM, 2000 ohm, 1% 1/2W, HP Part No. 0757-0824.
ChangeR55* to R:FXD, MET FILM, 402K ohm, 1% 1/2W, HP Part No. 0698-4022.
Retain the asterisk (*) to indicate FACTORY SELECTED PART, TYPICAL VALUE GIVEN.
Change R56 to R:FXD, MET FILM, 500K ohm, 1% 1/2W, HP Part No. 0757-0052.
Change R58 to R:FXD, MET FILM, 402K ohm, 1% 1/2W, HP Part No. 0698-4022.
Change R59, R60, R61, R62, R63, and R64 to R:FXD, MET FILM, 604K ohm, 1%, 1/2W, HP Part No. 0757-0155.
Change R65 to R:FXD, MET FILM, 215K ohm 1%, 1/2W, HP Part No. 0757-0127.
Change R67 to R:FXD, MET FILM, 1 Megohm, 1% 1/2W, HP Part No. 0757-0059.
Change R68 to R:FXD, MET FILM, 500K ohm, 1% 1/2W, HP Part No. 0757-0052.

Page 5-15, Figure 5-12 and Page 6-5, Table 6-1:
Change R202 and R203 to R:FXD, MET FILM, 1000 ohm, 1%, 1/2W, HP Part No. 0757-0159.

Page 5-17, Figure 5-14 and Page 6-5, Table 6-1:
Change R404 to R:FXD, MET FILM, 750K ohm, 1% 1/2W, HP Part No. 0757-0137.
Change R406 to R:FXD, MET FILM, 215K ohm, 1%, 1/2W, HP Part No. 0757-0127.
Change R413 to R:FXD, MET FILM, 1.5 Megohm, 1%, 1/2W, HP Part No. 0757-0156.
Change R415 to R:FXD, MET FILM, 12.1K ohm, 1%, 1/2W, HP Part No. 0757-0841.
Change R416 to R:FXD, MET FILM, 287K ohm, 1%, 1/2W, HP Part No. 0757-0154.
Change R419 to R:FXD, MET FILM, 100K ohm, 1% 1/2W, HP Part No. 0757-0367.
Change R420 to R:FXD, MET FILM, 1.5 Megohm, 1%, 1/2W, HP Part No. 0757-0156.
Change R422 and R424 to R:FXD, MET FILM, 1 Megohm, 1%, 1/2W, HP Part No. 0757-0059.
Change R423 to R:FXD, MET FILM, 500K ohm, 1%, 1/2W, HP Part No. 0757-0052.
Change R430 to R:FXD, MET FILM, 200K ohm, 1% 1/2W, HP Part No. 0757-0128.

Page 5-17, Figure 5-14 and Page 6-6, Table 6-1:
Change R431 to R:FXD, MET FILM, 365K ohm, 1%, 1/2W, HP Part No. 0757-0865.

CHANGE 8:

Page 5-13, Figure 5-10:
Replace existing Figure 5-10 with the attached copy.

Page 6-3, Table 6-1:
ChangeF1 (115V) to 4 amp. HP Part No. 2110-0055.
Change F1 (230V) to 2 amp, HP Part No. 2110-0002.
Change J3 to HP Part No. 1251-2357.
Add K5, Relay: 3PDT, HP Part No. 0490-0124.

Page 6-6, Table 6-1:
Change S2 to HP Part No. 3101-1272.
Change W1 to HP Part No. 8120-1348.

CHANGE 9:

Page 6-3, Table 6-1:
Change DS1 and DS2 from HP Part No. 1450-0048 to HP Part No. 1450-0419. This changes the front panel lamps from red to white to conform to IEC recommendations.

CHANGE 10:

Page 3-2, Table 3-1, Step 1:
Change all time delay references from 90 seconds to 120 seconds (three places).

Page 4-5:
Change all time delay references from 90 seconds to 120 seconds (four places).

Page 5-13, Figure 5-10:
Change K1 to 120 SECOND TIME DELAY.

Page 6-3, Parts List:
Change K1 to HP Part No. 0490-0933 RELAY: TIME DELAY, 120 second. (HP Part No. 0490-0933 is the recommended replacement for HP Part No. 0490-0135 in all models 493/495 Microwave Amplifiers regardless of serial regardless of serial prefix).

▶CHANGE 11:

The standard colors for this instrument are now mint gray (for front and rear panels) and olive gray (for all top, bottom, side, and other external surfaces). Option X95 designates use of the former color scheme of light gray and blue gray. Option A85 designates the use of a light gray front panel with olive gray used for all other external surfaces. New part numbers are shown on next page.

▶CHANGE 12:

In the parts list: Change Q301 to 1850-0098, change CR22 to 1901-0330, change C11 to 0160-4050, change CR401 and CR405 to 1901-0330, and delete CR22 and R66. In the Model 495A only, change CR402, 403, and 404 to 1901-0033.

▶CHANGE 13:

This change applies to Model 493A units with serial numbers above 1231A-1925 and Model 495A units with serial numbers above 1231A-1975. Change C16 from 50μF 25V (Part No. 0180-0058) to 100μA 25V (0180-0094), and change C15 from 0.0056μF 3KV (0160-0384) to 0.01μF 3KV (0160-2568).

▶CHANGE 14:

This change supersedes Change 2 to define which replacement TWT part numbers are presently active, which are usable as alternates, and which are obsolete. For the Model 493A: 1952-0039 is active; the 1952-0035 can be used as an alternate; and 1952-0017, -0022, and -0031 are obsolete. For the Model 495A: the 1952-0040 is active; the 1952-0036 can be used as an alternate; and 1952-0019 and -0023 are obsolete. The obsolete tubes must be fan cooled; when using the active or alternate tubes, delete air duct ass'y 00495-6001 since forced air on the collector end of these tubes is not required.

DESCRIPTION	HP PART NO.		
	STANDARD	OPTION A85	OPTION X95
Front Panel	00489-00002	489A-2C	←
Front Side Cover (2)	5000-8711	←	5000-0739
Rear Side Cover (2)	5000-8709	←	5000-0738
Top Cover Assy.	5060-8589	←	5060-0740

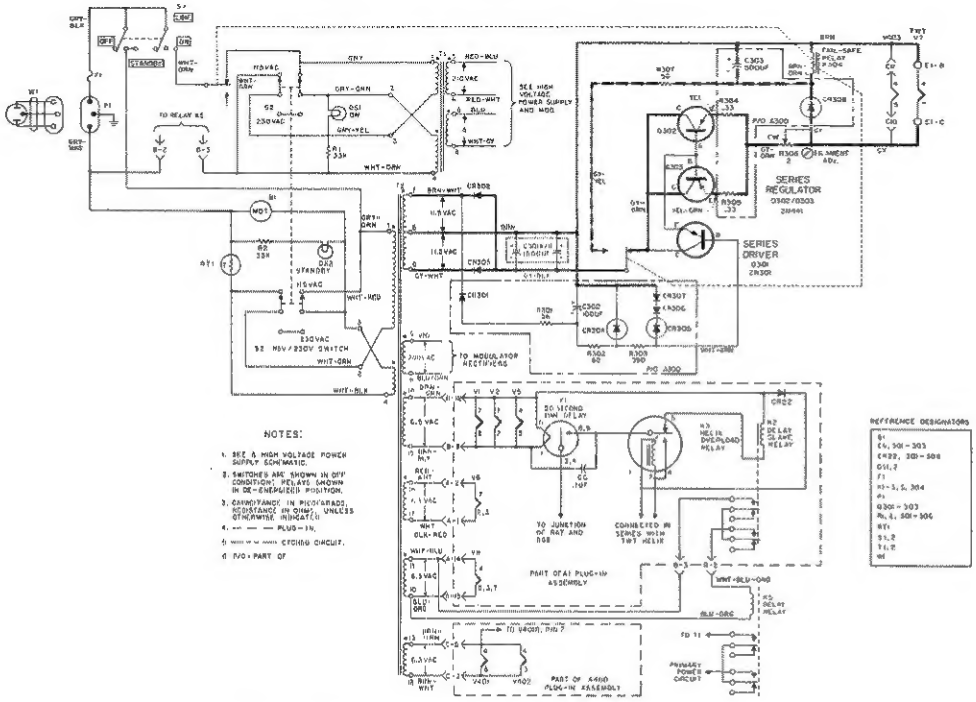

Figure 5-10. Filament Circuit (Schematic)

CONDITIONS OF WARRANTY

FOR

BACKWARD WAVE OSCILLATOR TUBES

AND

TRAVELING WAVE TUBES

▶ Microwave (BWO, TWT) tubes are warranted to be free from manufacturing defects. The operating tube warranty will be 12 months unconditional from date of shipment from Hewlett-Packard. If a tube carrying this warranty fails and must be replaced, only the applicable remaining warranty of the first tube is transferred to the replacement tube, or 90 days, which ever is greater. The Hewlett-Packard Company will process warranty claims for customers on tubes which were supplied by Hewlett-Packard for use in Hewlett-Packard instruments. The serial number of the tube failing and the serial number of the replacement tube must be noted on the warranty claim form.

"In Warranty" tubes purchased from Hewlett-Packard must be returned immediately (not to exceed 30 days from date of failure) with a complete Warranty Claim Form, to your local Hewlett-Packard Sales and Service Office. Addresses are listed in the Instrument Manual. Be sure to pack the tube in accordance with the Packing Instructions listed on the Warranty Claim Form; warranty allowance cannot be made on tubes received broken due to improper packaging or showing evidence of tampering.

Instructions for filing a warranty claim are listed on the "Microwave Tube Warranty Claim" form which is included with the Operating and Service Manual for your instrument. This form is also included with replacement Microwave tubes supplied by Hewlett-Packard. Additional copies may be obtained from your local Hewlett-Packard Sales and Service Office. (Please ref: HP Stock No. 9320-1865.)

Hewlett-Packard specified replacement tubes can be obtained from your local Hewlett-Packard Sales and Service Office.
